

What's New with Chef 11

Nathen Harvey
@nathenharvey

OPSCODE

What's New Since Chef 0.10?

- Windows support
- Librarian
- Spiceweasel
- Foodcritic
- Cookbooks in separate repositories
- Private Chef
- Food Fight podcast
- knife plugins for openstack, hp, azure, gce
- 0.10 renumbered to Chef 10
- full-stack client
- why-run
- output formatters
- Test Kitchen
- Solaris support
- Chef Developer Summit(2!)
- Berkshelf
- ChefConf
- Fauxhai
- docs.opscode.com
- Hangouts for reviews
- nyan-cat output formatter

Chef

RULE THE CLOUD

What is NOT in Chef 11

- CouchDB
- Ruby-based chef-server-api
- depsolver, gencode, treetop
- Merb
- OpenID support in Web UI
- Migration tooling (coming soon)

http://trainweb.org/carl/Pullman150/IMG_3380.jpg

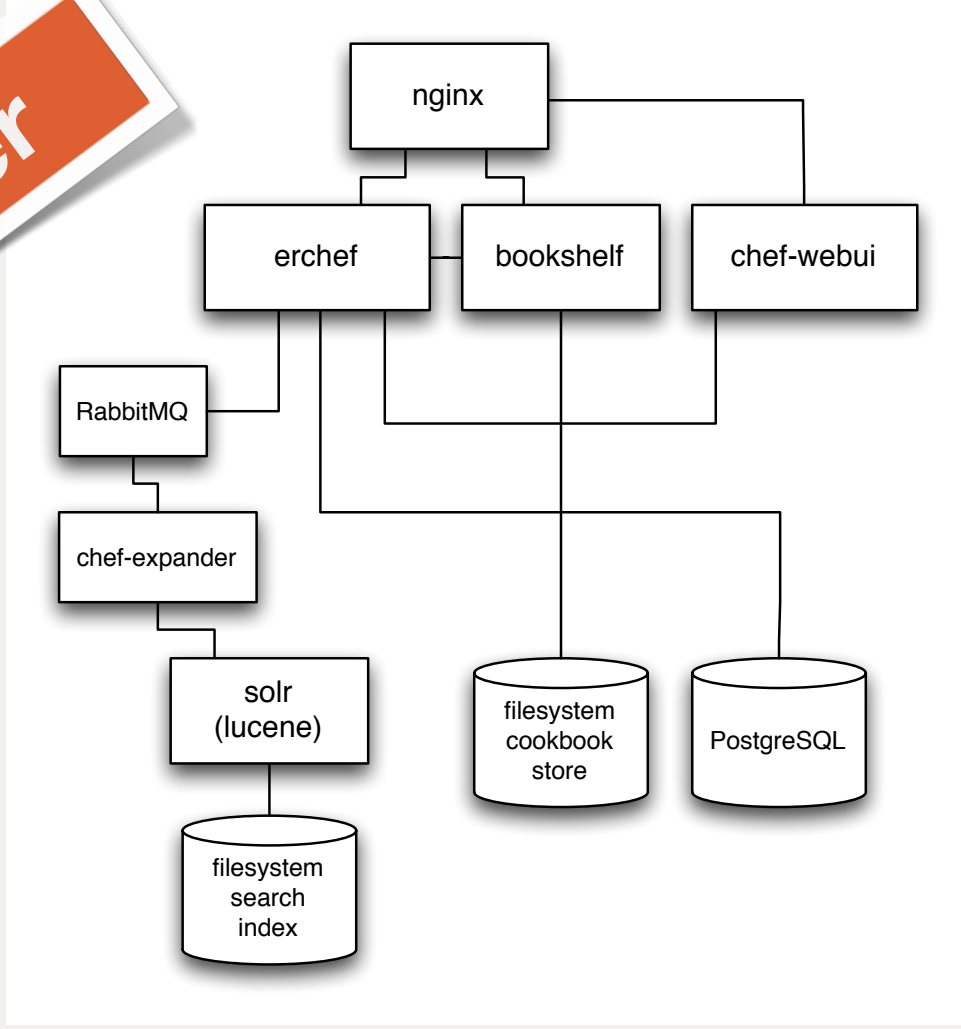

- PostgreSQL
- erchef
- nginx
- Rails
- bookshelf
- omnibus-chef server

- chef-apply
- partial search
- users with key pairs
- partials in templates
- knife-essentials

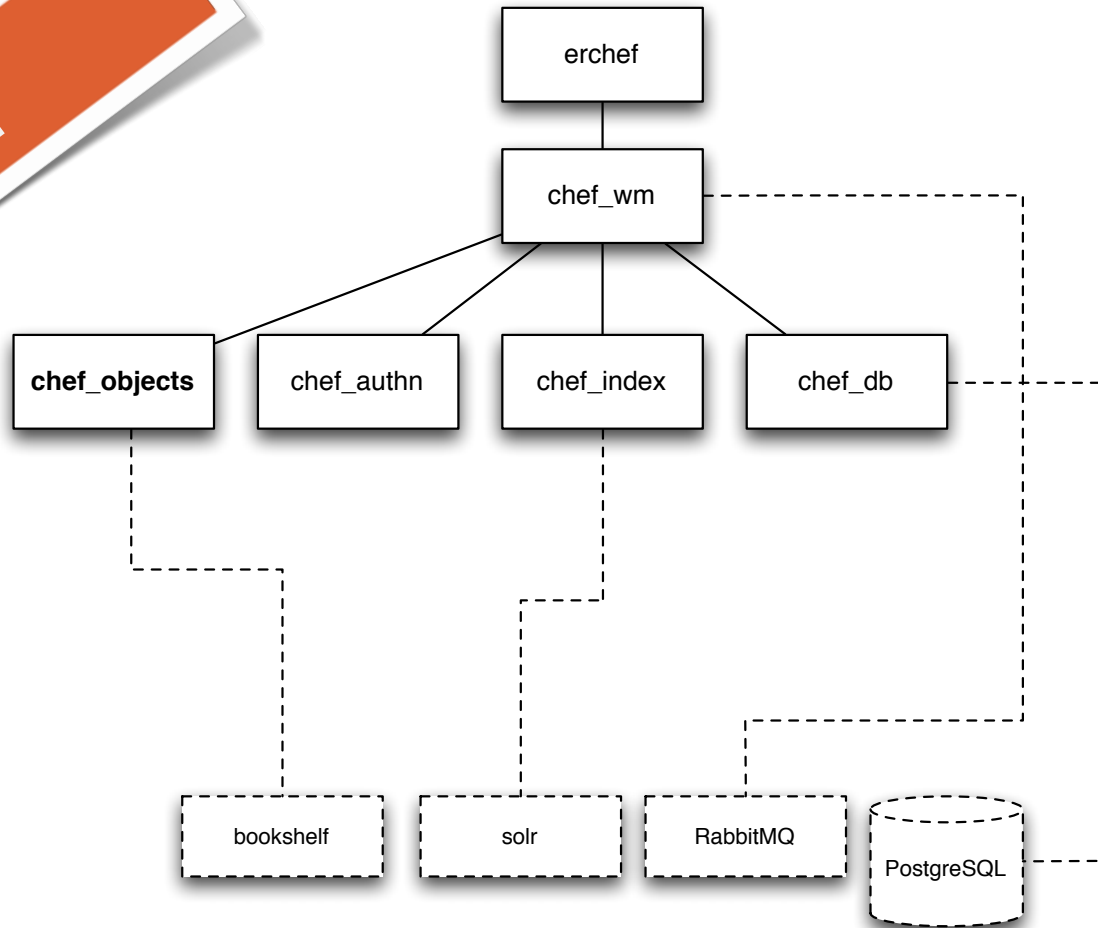

Erchef + SQL RDBMS

Chef Server

Erchef

- Erlang
- Concurrent, fault tolerant
- Distributed systems
- Complete Chef Server API rewrite

OPSCODE

Chef

Let's see some graphs!

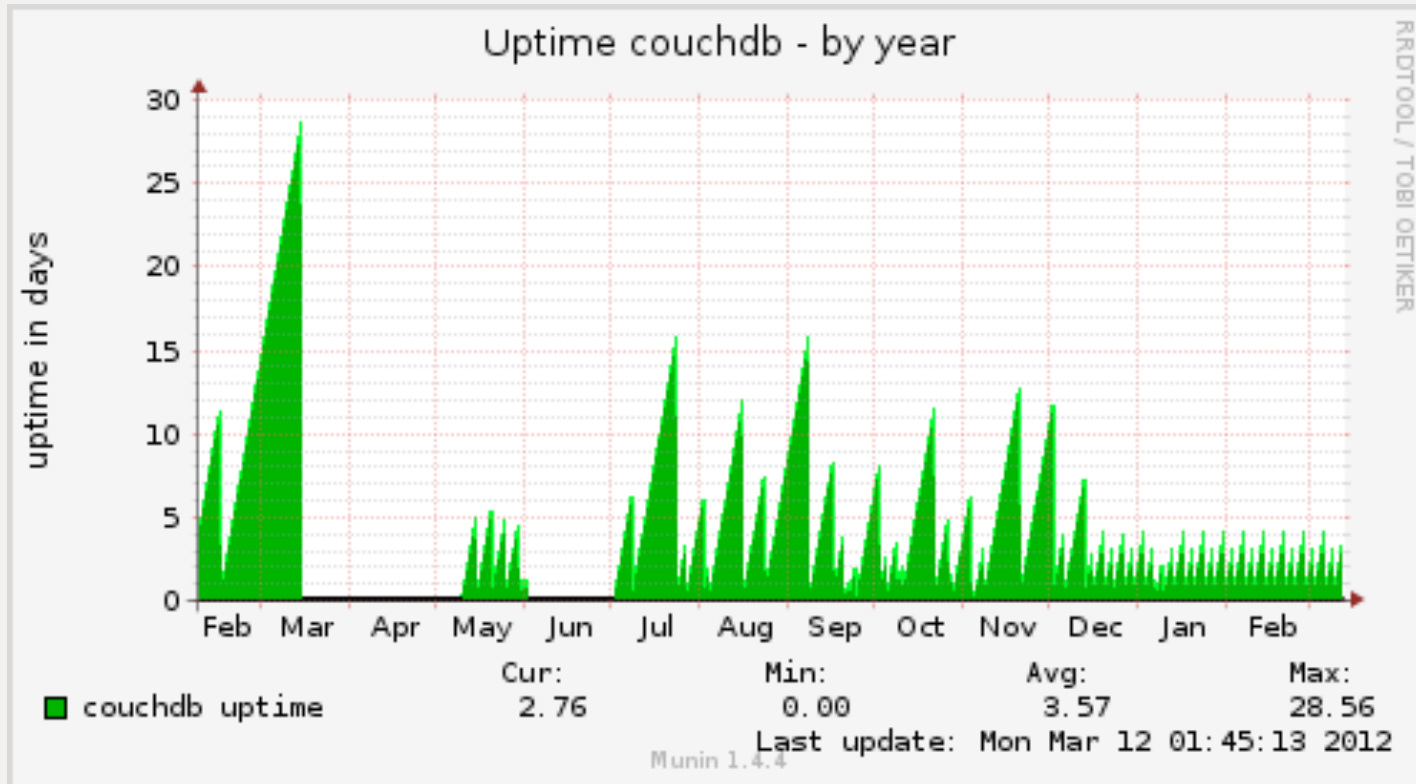

CPU Usage on Chef Server

- Erchef + Ruby Chef
- 12 mo old
- 3 CPU aggregate

CouchDB Uptime - cron'd restarts

CouchDB

MySQL

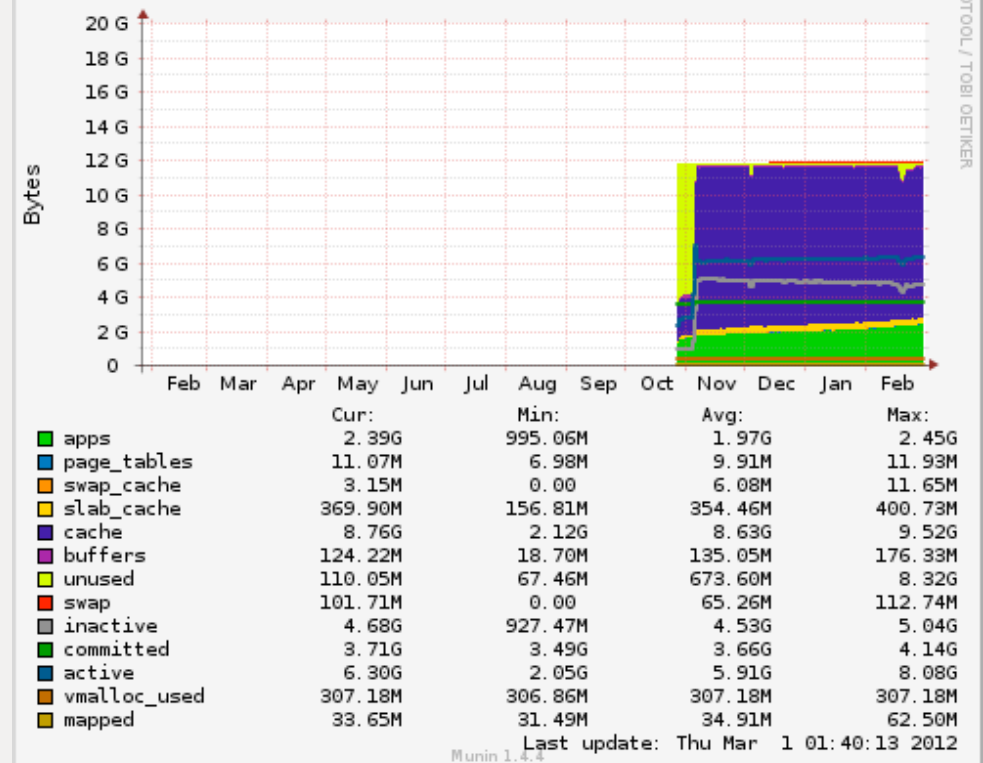

CouchDB

Memory usage - by year

MySQL

Memory usage - by year

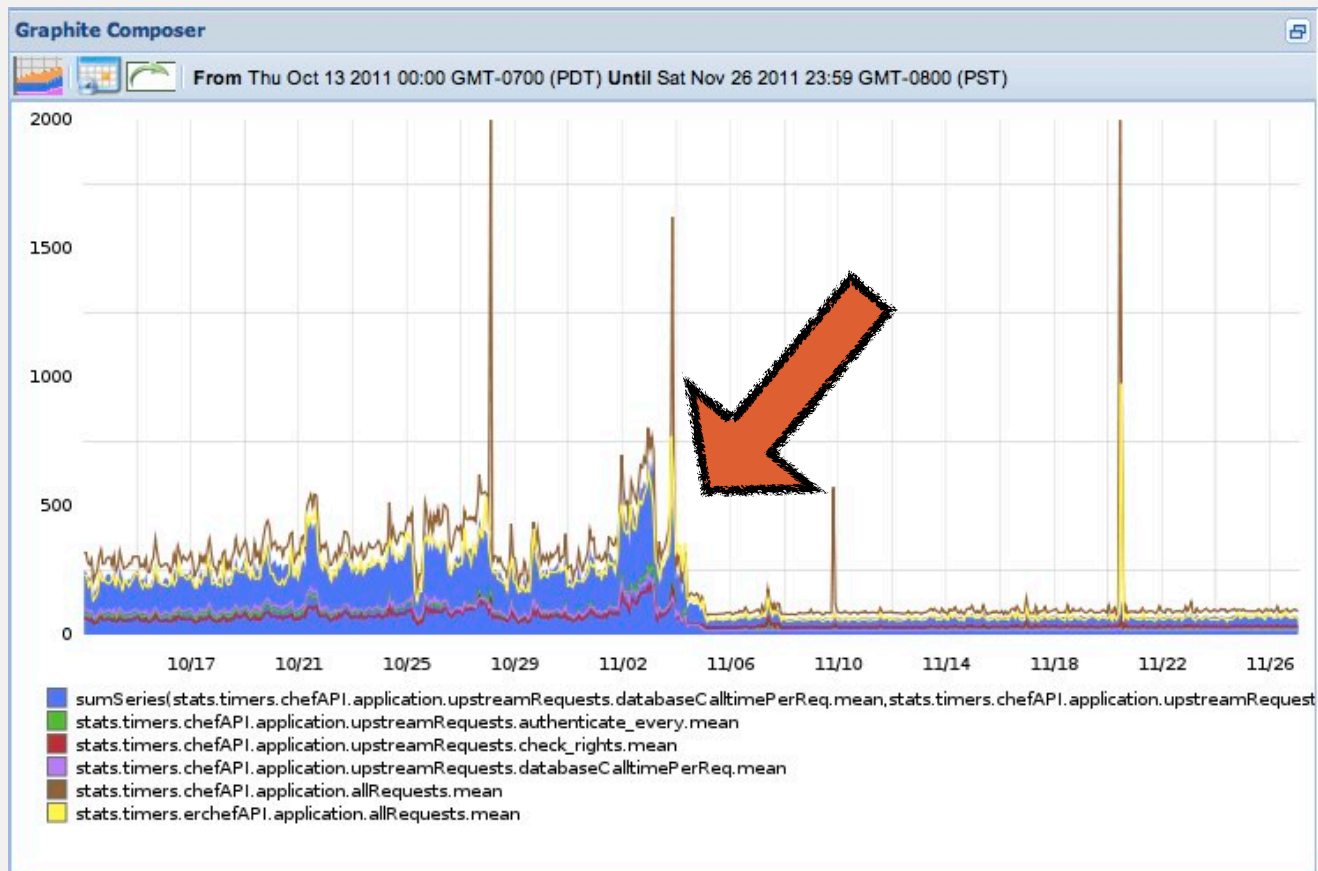

CouchDB

MySQL

Of course, we all know load average is not indicative of performance ;)

Some other Erchef Features...

- Nginx reverse proxy, https
- WebUI is Ruby on Rails
- Bookshelf stores cookbooks, like S3

- full-stack for the Chef server
- RPMs, DEBs, Build your own?
 - opscode.com/chef/install
- `chef-server-ctl`
 - `reconfigure`
 - `test`
 - `start/stop`

- Run a single recipe file
 - without modifying the node's `run_list`
- included with Chef, `/usr/bin/chef-apply`
- From a file, a string or stdin

```
% cat recipe.rb
package "git"
package "emacs"
git "git://github.com/jtimberman/.emacs.d.git" do
  action :sync
  user "jtimberman"
end

% sudo chef-apply recipe.rb
```

```
partial_search(:node, 'role:web',
  :keys => { 'name' => [ 'name' ],
            'ip'   => [ 'ipaddress' ],
            'kernel_version' => [ 'kernel', 'version' ]
          }
).each do |result|
  puts result['name']
  puts result['ip']
  puts result['kernel_version']
end
```

- instead of entire node, just the pieces you want
- massive reduction in bandwidth and memory

- users can have key pairs, just like clients
- knife actions as a user instead of a client
- post a public key when you create a user/client
- "knife user" (11.2.0)

```
<?xml version='1.0' encoding='UTF-8'?>
<server xmlns="urn:jboss:domain:1.2">
  <extensions>
    <% if @infinispan -%>
    <extension module="org.jboss.as.clustering.infinispan"/>
    <% end -%>
    <extension module="org.jboss.as.web"/>
    <% if @webservices -%>
    <extension module="org.jboss.as.webservices"/>
    <% end -%>
    <extension module="org.jboss.as.weld"/>
  </extensions>
  <% if @infinispan
    include_template "infinispan.xml.erb"
  end -%>
  <% if @webservices
    include_template "webservices.xml.erb"
  end -%>
  <socket-binding-group name="standard-sockets" >
    .....
  </socket-binding-group>
</server>
```

- Thanks to Andrea Campi!

http://www.flickr.com/photos/modern_fred/209556502/

- Treat local chef-repo and chef-server like a filesystem
- knife download
- knife diff
- knife show
- knife upload cookbooks/apache2
- knife list

Chef 11 Breaking Changes

- http://docs.opscode.com/breaking_changes_chef_11.html
- chef-shell (formerly shef)
- no implicit node attributes (no more `node['blah'] = 'foo'`)

http://www.flickr.com/photos/modern_fred/2096352938/

- attribute files may access role and environment attributes
- delayed notifications run after failed converge
- encrypted data bag item format change
- chef-client lock so safe from simultaneous runs

- **Commercial Support is now available for Open Source Chef, too.**
