

OPEN SOURCE IN 3D PRINTING

WHAT IS 3D PRINTING?

1. Grabs information from computer, on-board system, SD card
2. Prepares filament for printing
3. Heats extruder to desired temperature
4. Prints object

HOW IT WORKS

A decorative graphic consisting of several parallel white lines of varying lengths, slanted diagonally from the bottom right towards the top right, set against a blue background.

STEPS IN 3D PRINTING

- ▶ 1. Create object in CAD (Computer Assisted Design)
- ▶ 2. Convert the object into STL (standard tessellation language)
- ▶ 3. Open the STL file in a program that controls the 3D Printer
- ▶ 4. "Slice" or process the STL file into G-code for the printer to map out its strokes
- ▶ 5. Ready the printer for printing (loading filament, checking the belts, cleaning the build bed)
- ▶ 6. Print the object
- ▶ 7. Remove the object from the build plate
- ▶ 8. Use the print in your intended purpose

AFTER PRINTING

Timelapse of calibration print

PLA (Polylactic Acid)

Metal

ABS
(Acrylonitrile
butadiene
styrene)

Wood

COMMON TYPES OF FILAMENT

- ▶ TinkerCAD
- ▶ Repetier-Host
- ▶ Slic3r

DEMONSTRATION OF SOFTWARE

A decorative graphic consisting of several parallel white lines of varying lengths, slanted upwards from left to right, located in the bottom right corner of the slide.

- ▶ Go to <https://www.tinkercad.com/>
- ▶ Create an AutoDesk account
- ▶ Create your object!

YOUR TURN!

BENEFITS OF 3D PRINTING

3D Printing may potentially assist Medical Students
Education

First 3D Printed Jet Engine

Engineering

Cardiac Models

Doctors may potentially use 3D printed models to find anomalies in the body

Medical

3D Printed Pangolin Art

Credit: Hairy Lion by _primoz_

Art

- ▶ Copyright and intellectual infringement
- ▶ Ability to manufacture illegal goods at home

Downsides

DO THE BENEFITS OUTWEIGH THE
DOWNSIDES?

3D Printed Prosthetics

3D Printed Skin

3D Printed Cast

YES, YES THEY DO

RepRap – Rapid Replication

- ▶ Open Source community
- ▶ Goal: Develop a 3D printer that is able to produce a pure self-replicating device for it to be accessible for anyone
- ▶ Self-replication machine

Examples

- ▶ Prusa i3
- ▶ Darwin
- ▶ Mendel

OPEN SOURCE: REPRAP

- ▶ Founded in 2005 by Dr. Adreian Bowyer, a mechanical engineering lecturer at the University of Bath in England
- ▶ Sept. 13 2006 – RepRap 0.2 prototype [Zaphod prototype] printed the first part of itself
- ▶ April 14 2008 – The first user item is made by a RepRap: A clamp for the iPod to attach to a Ford Fiesta's dashboard
- ▶ Oct. 2 2009 – RepRap 2.0 [Mendel] printed its first part
- ▶ Aug. 31 2010 – RepRap 3.0 [Huxley] was named and developed

HISTORY

REPRAP'S FIRST PART

REPRAP MENDEL

REPRAP HUXLEY

- ▶ Accessible
- ▶ Affordable
- ▶ Documentation
- ▶ Ability to “evolve”

BENEFITS OF OPEN SOURCE 3D PRINTING

- ▶ Developer: Josef Prusa
- ▶ Parts can be found on GitHub as STL files
- ▶ One of the most popular designs
 - ▶ Many derivatives (ex. Anet a8, mini i3, Graber i3)

PRUSA I3

My Attempt (Anet A8)

FINISHED (TOTAL TIME:
~13 HRS)

FIRST PRINT: 4MM CALIBRATION CUBE

FACT: 3D PRINTING
ISN'T PERFECT!
