SCALE10x, Los Angeles, CA, USA

20 January 2012
whoami

• Chief Evangelist, MariaDB
• Formerly of MySQL AB/Sun Microsystems
• Past lives included FESCO (Fedora Project), OpenOffice.org

fb.com/MariaDB.dbms | @mariadb
Aims

• Give you an update of what we’ve done with MariaDB

• Discuss the broader MySQL ecosystem
What is it?

- A branch of MySQL with more features?
- A branch of MySQL with better features?
- A fork?
MariaDB is...

- Community Developed
- Feature Enhanced
- Backward Compatible

fb.com/MariaDB.dbms | @mariadb
Who’s behind it?

- MySQL (database) owned by MySQL AB (company)
- Monty Program is just a sponsor of MariaDB
- maria-captains: 64% Monty Program, 36% community (+16% MP 3Q/2011)

fb.com/MariaDB.dbms | @mariadb
When did this begin?

- Sun buys MySQL AB in January 2008
- Oracle proposes acquisition of Sun Microsystems in April 2009
- Widenius decides that beyond the engine (February 2009), focus on MariaDB, a complete database solution
Why MariaDB?

- MySQL - an open source product or project?
- MariaDB is an open source project

fb.com/MariaDB.dbms | @mariadb

Thursday, 26 January 12
Aims of MariaDB

• 100% compatible, drop-in replacement to MySQL
• Stable (bug-free) releases
• GPLv2

fb.com/MariaDB.dbms | @mariadb
Compatibility with MySQL

- There is no NDB cluster storage engine
- Client libraries, client-server protocol, SQL dialect, replication master-slave all similar
- Data files are supported as long as its similar between versions
- Tools are similar (some additional tools for Aria, PBXT)
- XtraDB enabled by default; InnoDB included, but not enabled by default
- [http://kb.askmonty.org/v/mariadb-versus-mysql-compatibility](http://kb.askmonty.org/v/mariadb-versus-mysql-compatibility)

fb.com/MariaDB.dbms | @mariadb

Monty Program
What’s in MariaDB 5.1

- Released February 2010
- Create external buildsystem using Buildbot + VMs for test + builds
- Release filled with storage engines
  - XtraDB, PBXT, FederatedX, (M)Aria
- Croatian collations
- Numerous bug fixes
- Test cases and coverage improvements
- Removal of mutexes
- Compiler warnings gone!
What’s in MariaDB 5.1

• XtraDB (ENGINE=InnoDB)

• enhanced InnoDB designed to better scale on modern hardware; backward compatible, scale better on many cores, use memory more efficiently

http://www.percona.com/docs/wiki/percona-xtradb:start

fb.com/MariaDB.dbms | @mariadb
What’s in MariaDB 5.1

- PrimeBase PBXT
- Transactional, foreign keys, ACID, MVCC (read w/o locking)
- Row-level locking during (SELECT FOR) UPDATE
- Rollback transactions, recovery after restart very fast (identifies garbage making undo unnecessary)
- Write once w/log-based storage; write data to DB, without first writing in transaction log

http://kb.askmonty.org/v/about-pbxt

fb.com/MariaDB.dbms | @mariadb
What's in MariaDB 5.1

- Extended statistics for slow query log
- PROCESSLIST with microsecond precision
  - *TIME_MS* in INFORMATION_SCHEMA.PROCESSLIST [http://kb.askmonty.org/v/time_ms-column-in-information_schemaprocesslist](http://kb.askmonty.org/v/time_ms-column-in-information_schemaprocesslist)

```
MariaDB [(none)]> select id, time, time_ms, command, state from information_schema.processlist, (select sleep(2)) t;

+----+-----+-----------+--------+--------+
<table>
<thead>
<tr>
<th>id</th>
<th>time</th>
<th>time_ms</th>
<th>command</th>
<th>state</th>
</tr>
</thead>
<tbody>
<tr>
<td>2</td>
<td>2</td>
<td>2002.822</td>
<td>Query</td>
<td>executing</td>
</tr>
</tbody>
</table>
+----+-----+-----------+--------+--------+
1 row in set (2.01 sec)
```
What’s in MariaDB 5.1

- Table elimination

- Query highly normalised data, it is sometimes possible to resolve a query without accessing some tables the query refers to e.g. http://kb.askmonty.org/v/what-is-table-elimination

- Pool of threads (MySQL 6 backport)

- Use a limited set of threads to handle all queries vs one-thread-per-connection. Win if most queries are short running, and there are few table/row locks. http://kb.askmonty.org/v/pool-of-threads
What’s in MariaDB 5.2

- Released November 2010
- MariaDB 5.2.10 (MariaDB 5.1.60 - changes up to MySQL 5.1.60)
- Pluggable authentication
  - authentication of users handled by plugins
  - mysql_native_password (20 byte) and mysql_old_password (8 byte) included by default
  - CREATE USER foo IDENTIFIED VIA mysql_native_password USING 'pass';
  - == CREATE user foo IDENTIFIED BY PASSWORD 'pass';
- Use socket_peercred - if already logged in via Unix credentials, MariaDB will trust it
  - http://kb.askmonty.org/v/development-pluggable-authentication
- Now with a PAM authentication plugin!
- User Statistics (userstatsv2)
  - Percona, Google, Weldon Whipple. Understand server activity better, identify database loads http://kb.askmonty.org/v/user-statistics
  - Client, user, index, table statistics
What’s in MariaDB 5.2

- Segmented MyISAM keycache
- mitigates thread contention for key cache lock, with notable 250% performance improvements

http://kb.askmonty.org/v/segmented-key-cache
fb.com/MariaDB.dbms | @mariadb
MariaDB 5.2: SphinxSE

- CREATE TABLE t1 (..) ENGINE=SPHINX CONNECTION="sphinx://localhost:9312/test";

- SELECT * from t1 WHERE query='test it;mode=any';

- matching modes, limits, filters, ranges supported

- monitor it - SHOW ENGINE SPHINX STATUS;

- can JOIN a SphinxSE search table and tables using other engines as well

- [https://kb.askmonty.org/v/about-sphinxse](https://kb.askmonty.org/v/about-sphinxse)

Thursday, 26 January 12
MariaDB 5.3: NoSQL

- HandlerSocket
  - direct access to InnoDB/XtraDB
- no SQL, simple CRUD operations on tables

- Dynamic columns
  - different set of “virtual columns” for each row in your table
  - store different attributes for each item (see: e-commerce shops)

fb.com/MariaDB.dbms | @mariadb
MariaDB [test]> create table t1 (id int auto_increment primary key,
  ->  name varchar(40),
  ->  type enum ("shirt", "phone", "computer"),
  ->  price decimal(10,2),
  ->  dynstr mediumblob);
Query OK, 0 rows affected (0.05 sec)

MariaDB [test]> insert into t1 (name, type, price, dynstr) values
  -> ("Funny shirt", "shirt", 10.00, COLUMN_CREATE(1, "blue", 10, "XL")),
  -> ("nokia", "phone", 649, COLUMN_CREATE(1, "black", 2, "touchscreen")),
  -> ("htc Desire hd", "phone", 579, COLUMN_CREATE(1, "black", 3, "Android")),
  -> ("BM/Lenovo Thinkpad X60s", "computer", 419, COLUMN_CREATE(1, "black", 3, "Linux"));
Query OK, 4 rows affected (0.00 sec)
Records: 4 Duplicates: 0 Warnings: 0

MariaDB [test]> select id, name, type, price, length(dynstr) as len, column_list(dynstr) as list from t1;

<table>
<thead>
<tr>
<th>id</th>
<th>name</th>
<th>type</th>
<th>price</th>
<th>len</th>
<th>list</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Funny shirt</td>
<td>shirt</td>
<td>10.00</td>
<td>17</td>
<td>1,10</td>
</tr>
<tr>
<td>2</td>
<td>nokia</td>
<td>phone</td>
<td>649.00</td>
<td>27</td>
<td>1,2</td>
</tr>
<tr>
<td>3</td>
<td>htc Desire hd</td>
<td>phone</td>
<td>579.00</td>
<td>23</td>
<td>1,3</td>
</tr>
<tr>
<td>4</td>
<td>BM/Lenovo Thinkpad X60s</td>
<td>computer</td>
<td>419.00</td>
<td>21</td>
<td>1,3</td>
</tr>
</tbody>
</table>

4 rows in set (0.00 sec)

MariaDB [test]> SELECT name FROM t1 WHERE COLUMN_GET(dynstr, 1 as char(10)) = "black";

<table>
<thead>
<tr>
<th>name</th>
</tr>
</thead>
<tbody>
<tr>
<td>nokia</td>
</tr>
<tr>
<td>htc Desire hd</td>
</tr>
<tr>
<td>BM/Lenovo Thinkpad X60s</td>
</tr>
</tbody>
</table>

3 rows in set (0.00 sec)

MariaDB [test]> SELECT COLUMN_GET(dynstr, 1 as char(10)) as colour, count(*) FROM t1 group by COLUMN_GET(dynstr, 1 as char(10));

<table>
<thead>
<tr>
<th>colour</th>
<th>count(*)</th>
</tr>
</thead>
<tbody>
<tr>
<td>black</td>
<td>3</td>
</tr>
<tr>
<td>blue</td>
<td>1</td>
</tr>
</tbody>
</table>

2 rows in set (0.00 sec)
MariaDB 5.3: group commit

- Group commit for the binary log
  - `sync_binlog=1`
  - `innodb_flush_log_at_trx_commit=1`

MariaDB 5.3: replication

- Checksums for binlog events (5.6 backport)
- `START TRANSACTION WITH CONSISTENT SNAPSHOT` works w/ binlog
- Obtain binlog pos. w/o blocking other queries
- `mysqldump --single-transaction --master-data` => non-blocking backup! (new slave provisioning?) Works w/XtraDB+PBXT
- Row-based replication for tables w/no primary key

fb.com/MariaDB.dbms | @mariadb
MariaDB 5.3

- Progress reporting for ALTER TABLE/LOAD DATA INFILE
- mytop included
- Optimiser changes
- @@optimizer_switch flags (default=off)

- disk access: Index Condition Pushdown (ICP), Multi-Range Read (MRR)
- join: Classic Hash Join, Batched Key Access (ordered retrievals via MRR), and many many more optimizations

Monty Program
MariaDB 5.3: Subqueries finally!

- DBT-3, 60M line item rows, 29GB XtraDB database
- optimizer_switch=‘semijoin=on’ / materialization=on

Query: orders from customers with negative balance:

```sql
SELECT * FROM orders
WHERE o_custkey IN
    (SELECT c_custkey FROM customer
     WHERE c_acctbal < -500);
```

MariaDB 5.2 (any MySQL): 45 sec (slow)

MariaDB 5.3: 0.43 sec (faster ~ 100x)

Query: find customers with top balance in their nations:

```sql
SELECT c_name, c_address
FROM customer
WHERE c_acctbal IN (SELECT max(c_acctbal)
                      FROM customer
                      GROUP BY c_nationkey);
```

MariaDB 5.2 (any MySQL): > 1.5 hours (impossible)

MariaDB 5.3: 3.2 sec (faster ~ INF)

Thursday, 26 January 12
MariaDB 5.3: Subqueries

- Instant EXPLAIN

fb.com/MariaDB.dbms | @mariadb
MariaDB 5.3: User Feedback Plugin

- New “phone home” plugin (works with Percona server, MySQL)
- disabled by default -- please consider enabling it (feedback=on)
- [http://mariadb.org/feedback_plugin/](http://mariadb.org/feedback_plugin/)

fb.com/MariaDB.dbms | @mariadb
MariaDB 5.3 & 5.5

- MariaDB 5.3 - RC now
- MariaDB 5.3.3 - 21/12/2011
- MariaDB 5.5 - Beta any day now
- https://launchpad.net/maria/5.5

fb.com/MariaDB.dbms | @mariadb
How open is MariaDB?

- Mailing lists: Launchpad
  - maria-developers@lists.launchpad.net

Deployments, deployments, deployments

“MariaDB had these same bugs that we ran into with MySQL. However the big difference was that when we reported these bugs, they were quickly resolved within 48 hours!” -- Dreas van Donselaar, Chief Technology Officer, SpamExperts B.V. after migrating over 300 servers from MySQL 5.0 to MariaDB 5.1.

“Migrating from MySQL 5.1 to MariaDB 5.2 was as simple as removing MySQL RPMs and installing the MariaDB packages, then running mysql_upgrade.” - Panayot Belchev, proprietor, Host Bulgaria on providing MariaDB to over 7,000 of their web hosting customers.

“We made the switch on Saturday -- and we’re seeing benefits already -- our daily optimization time is down from 24 minutes to just 4 minutes” -- Ali Watters, CEO, travelblog.org

happy users: pap.fr, wabtec, Paybox Services, OLX, Jelastic, etc.

Getting MariaDB

- http://mariadb.org/ is the site + downloads
- Get it via OpenSUSE build service
- Its in Gentoo, FreeBSD, Homebrew
- http://kb.askmonty.org/v/distributions-which-include-mariadb

fb.com/MariaDB.dbms | @ mariadb
The future?

- GIS features making it into MariaDB 5.3
- Merging takes time
- Features (different implementations) make it into upstream
- Getting into distributions (Fedora/EPEL policies), Ubuntu/Debian, etc?

fb.com/MariaDB.dbms | @mariadb

Thursday, 26 January 12
We have a book
Support

• Monty Program does NRE/engineering work for MySQL/MariaDB (not L1/L2 support)

• Support via capable service providers
  • http://mariadb.org/service-providers/
  • SkySQL (here), FromDual, Open Query, SoftMethod GmbH, Percona

fb.com/MariaDB.dbms | @mariadb
We’re on social media

- facebook: fb.com/MariaDB.dbms
- twitter: @mariadb
- google plus: search for mariadb
