

Voting in Participatory Budgeting

Lodewijk Gelauff - www.bijv.org - lodewijk@stanford.edu

Deliberative Democracy Lab - deliberation.stanford.edu

Joint work with Ashish Goel's Crowdsourced Democracy Team

SCaLE 21x
March 2024

Background: My Research

Engaging residents in policy decisions, using online technology

- Structured conversations for an open-ended consultation at scale
 - Video-chat Deliberation platform self-moderating small groups
 - stanforddeliberate.org
- Participatory budgeting
 - Voting in participatory budgeting elections (cities etc)
 - PBstanford.org
- City budgeting feedback
 - More bespoke approaches - happy to discuss!
 - budget.pbstanford.org

Today

- Participatory Budgeting
 - Overview
 - Process
- Stanford Participatory Budgeting Platform
- Voting methods
 - Overview
 - Comparative research
- Other budget feedback processes
 - Clustering
- What else?

Democratic decision making

- Decaying trust in politics and politicians
- People want to be involved
 - Interest in local politics high?!
 - Beyond 'politics'
- Transparency
- Accountability

Stanford Crowdsourced Democracy Team

Management Science and Engineering, Prof. Ashish Goel

Improving societal decision making through online tools.
Scaling up participatory decision making in a fair and efficient way.

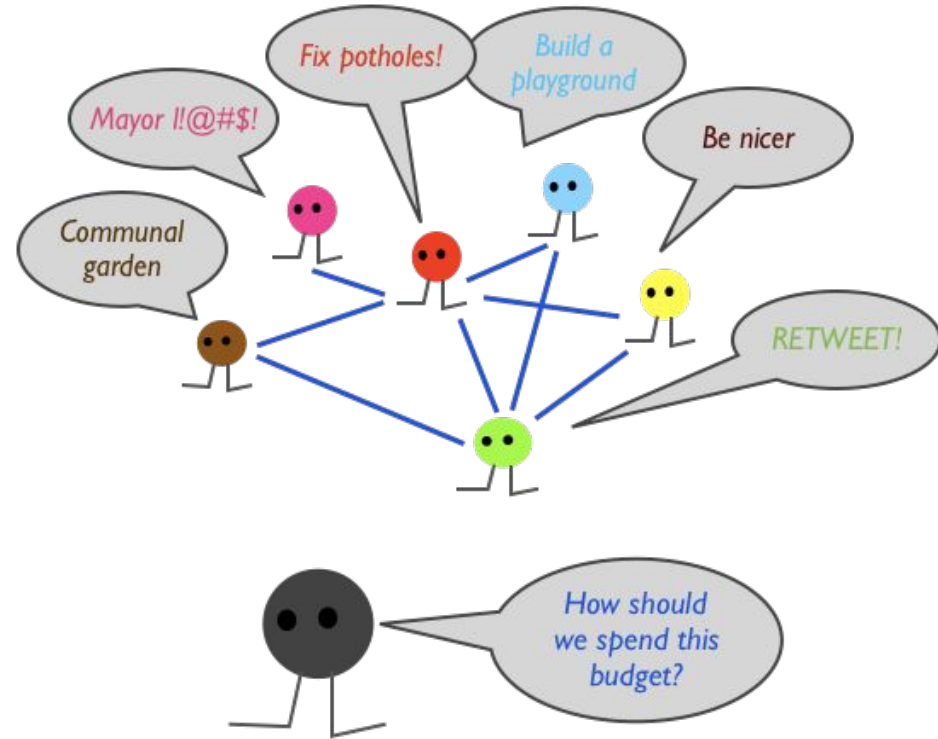

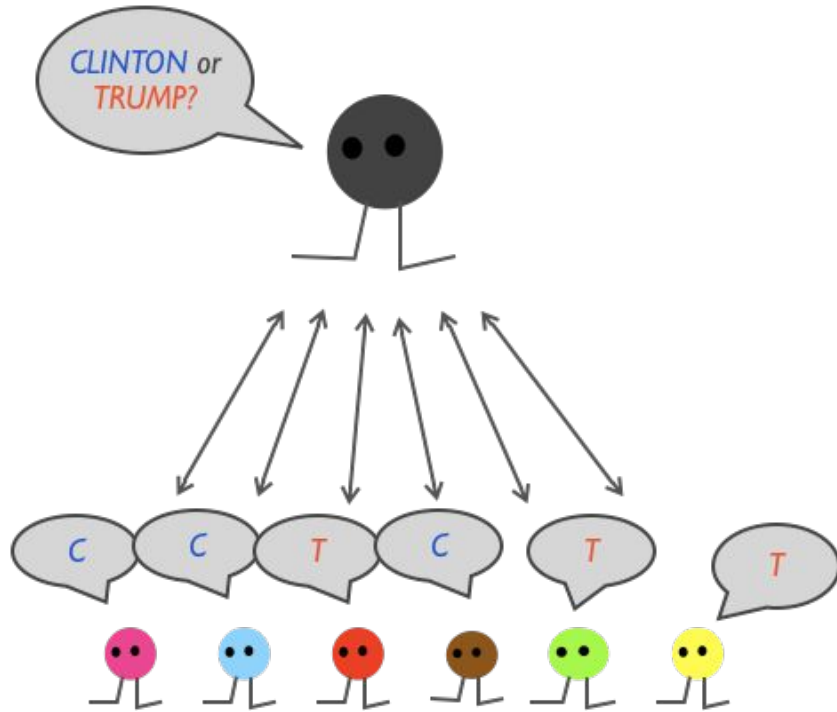

Focus on complex decisions: budgets, deliberations, negotiations

Theory and practice: designing, analyzing, implementing and comparing group decision algorithms

Collaborate with governments and NGO's: provide tools

Complex decisions

Participatory Budgeting

Gelauff, Lodewijk, and Ashish Goel. “Rank, Pack, or Approve: Voting Methods in Participatory Budgeting”, *Under review* (2024) [ArXiv:2401.12423](https://arxiv.org/abs/2401.12423)

Why PB?

Courtesy: David Lee

Fluid concept

So many definitions!

- First mention in late 1980s (e.g. Porto Alegre, Brazil)
- 11,000+ processes counted worldwide (PB World Atlas), 300+ in USA (PBP)
- Different definitions. In common: allocate budget across items (projects) with stakeholder participation.
- Often participation in both in development of projects and some voting phase

Process

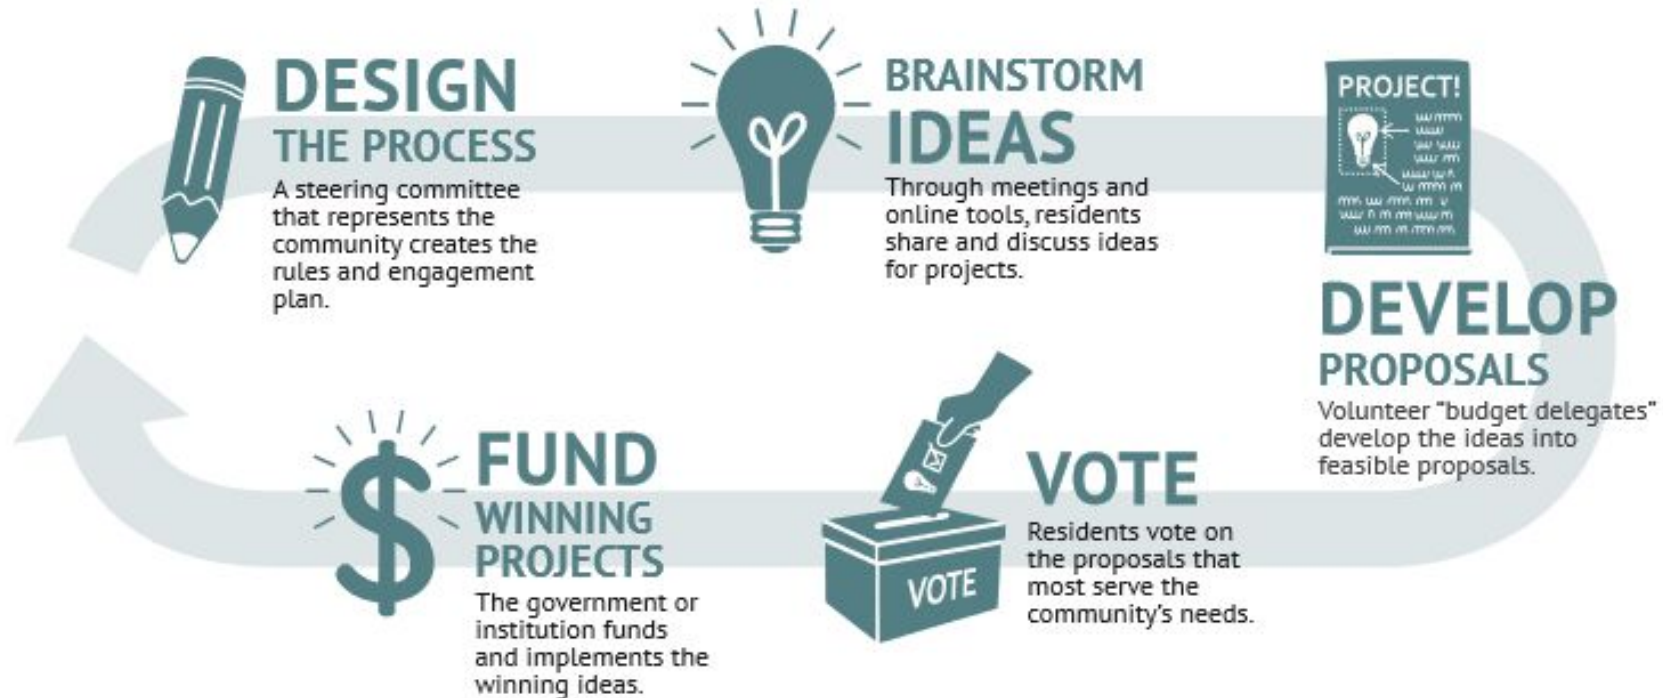

Image: Participatory Budgeting Project

BALLOT QUESTION NUMBER 2

How should the remaining portion of the 49th Ward menu money be allocated? You may vote for up to FOUR (4) projects from the seven (7) projects below (select no more than four).

Table with 2 columns: PROJECTS and COST. Projects include Park Benches, Streetlights on Greenview, Water Feature at Langdon Park, Jarvis Countdown Crosswalk, Zócalo in Touhy Park, Pratt Bike Lane Extension, and Park Community Bulletin Boards.

A - City Roots Community Land Trust
City Roots wants to purchase property to build the community land trust in Rochester, which keeps land permanently affordable to the public and gives community members a voice in neighborhood development.
Total Budget: \$50,000

B - Emergency Security Deposit Fund
Funding for this project will be used to provide emergency security deposit funding to families in need of assistance, administered through the Rochester Continuum of Care.
Total Budget: \$50,000

C - Consumer Credit Counseling Services (CCCS)
CCCS is a local-nonprofit that has improved the financial wellness of Rochesterians since 1970. This funding will increase our capacity to provide 400 more 1:1 financial counseling sessions, enroll 25 low-income residents in long-term financial coaching, and enroll 25 youth in our financial education program.
Total Budget: \$50,000

D - Feed People, Not Landfills: Flower City Pickers Food Recovery
The Flower City Pickers (FCP) Food Recovery Project will allow FCP to recover and distribute safe, nutritious, but formerly landfill-bound food to a network of 45+ food pantries, homeless shelters, soup kitchens, and local farms at no cost to the receiving agencies.
Total Budget: \$ 30,000

E - Rochester Youth Education Summit
A Summit for Rochester City School District students with various speakers, workshops and panel discussions addressing many of the issues the youth in our city face on a daily basis: poverty, financial literacy, structural racism, trauma, career building. The Summit's aim would be to EDUCATE, ENGAGE & INSPIRE our most important gift - our children - toward personal and professional success.
Total Budget: \$20,000

F - RCSD School 16 Builds Community in the 16th Ward
Guest specialists and faculty help students to strengthen character, learn, create, and perform. Students are celebrated in an Art and Music Festival
Total Budget: \$19,654

G - The Esther Project
The Esther Project seeks to provide women and their children with transitional housing and support. This funding would allow the project to finish a house and begin using it as space for women to live and thrive!
Total Budget: \$25,375

H - House of Mercy Next Steps Moving Company
The House of Mercy Next Step Properties Moving Company Project seeks to provide furnishings and moving services for individuals transitioning from homeless shelters to permanent housing. This funding would fund and staff a storage facility for furniture donations, along with pick-up and delivery of those items.
Total Budget: \$50,000

I - Rochester Community Facebook Page
On any given day in Rochester, there are community events that are fun, informative, and free. A Facebook page dedicated to promoting these events in Rochester will make it easier for people to find out about these events. This Facebook page will increase attendance to these events and help build a sense of community in Rochester.
Total Budget: \$10,000

J - North Star Shines
North Star Shines is a project that will involve youth in the development of skills that include public speaking and drama. It would increase ELA skills as well as the history of African Americans. The works of August Wilson, Frederick Douglass and others will be used to move this project.
Total Budget: \$15,000

K - Supporting Community Gardens & Urban Farms in Rochester
Foodlink and Eat Smart New York seek funding to support community-based and entrepreneurial urban agriculture operations in Rochester. 30 existing operations will receive \$2,000-\$5,000 for materials & equipment, structures, land acquisition or participant support. Funded operations will also receive coaching, technical assistance and cooking & nutrition education.
Total Budget: \$30,000

L - Emergency Services Family Stabilization Network (EFSN)
Funding for this project would go to a network of agencies throughout Rochester and would be used to resolve the immediate needs of families for food, clothing, rent/mortgage assistance, transportation, etc.
Total Budget: \$50,000

M - EMANICIPATION
The EMANICIPATION Project is designed to free our community of trauma caused by Domestic Violence, Sexual Abuse, Poverty and Racism. Funding will allow ALL of the community to share their experiences and heal through radio, outreach, church sermons, small groups, workshops, whichever the community is comfortable in sharing and healing.
Total Budget: \$45,000

N - The Hangout Spot
"The Hangout Spot," a program of Marvelous Mind Academy, seeks to rectify all barriers to parents entering and staying in the workforce with an innovative childcare solution operable during B and C shifts. The Hangout Spot will be setup as a worker-owned coop and funding will allow The Hangout Spot to appropriately remodel a space and purchase quality play materials and child-safe furniture.
Total Budget: \$50,000

O - 1st Mile Last Mile
Provide transportation (i.e. ride hailing or van pooling services) to assist those in need when public bus transportation is not enough.
Total Budget: \$50,000

P - House of Mercy Emergency Housing Fund
The House of Mercy Emergency Housing Fund Project seeks to provide immediate funding to prevent homelessness or keep people in housing. This project would provide funding and improve coordination of funds with needs. It will also fund creating and managing a tracking system to follow client's progress and improve Rochester Homeless Continuum of Care.
Total Budget: \$50,000

Q - 146to15
Lead by local Artist Shawn Darwooddy, 146to15 will use neighborhood engaged public mural art and community clean up to generate social change, creative placemaking, beauty, and positive attention to a historic area of Rochester, the 14605 zip code, also known as CONEA.
Total Budget: \$50,000

R - Free Bicycles for Work or School
Funding would go to R Community Bikes to provide free bicycles for people to use to get to work or school.
Total Budget: \$10,000

S - Growing Out of Poverty
Training, Deploying & Employing School Without Walls (SWW) Community Service Students to Support Community Gardening, Greening & Farm Projects Across the City of Rochester - Healthy Activity, Healthy Food & Healthy Neighborhoods
Building a Workforce for a Green Future...
Total Budget: \$31,650

T - Tiny House Project
The Tiny House Project seeks to provide very low income individuals, particularly veterans, with affordable permanent housing. This funding would build a prototype house to advance the creation of a Tiny House community in Rochester.
Total Budget: \$50,000

U - Concrete Rose Project
The Concrete Rose Project will connect high school students with career exploration, training, and employment opportunities, \$23,000 of our funding specifically allocated to pay young people for training and project based work. Furthermore, we will establish a social-emotional skill development program for young men of color ages 10-12 y/o for the purpose of assisting the participating youth to make a smooth transition from childhood to manhood.
Total Budget: \$50,000

V - HomeBurger Prep /Credit Improvement
This project will provide free case management services, financial literacy courses, and credit building loans to people living in the city of Rochester that want to improve their credit and purchase a home. This project is a partnership with, Visions Federal Credit Union and the Rochester Homeless Continuum of Care.
Total Budget: \$50,000

VOTE HERE!
Please use this space to select your 5 projects by writing the project letters in the box below. The 1st box is your 1st choice project.
1st 2nd 3rd 4th 5th

Why digital/online

- Young voters!
- Richer information for voters (optional data, audiovisual)
- Ease of voting
- If online: Reach out to new audiences through advertising
- Analysis: faster counting!

Photo: Sukolsak Sakshuwong

Participatory Budgeting

Some interesting tidbits from the academic literature:

- Analysis from New York suggests that engaging traditionally underrepresented groups increases their likelihood of voting in elections
- Engagement in budget exercises has been shown to improve understanding of budgetary issues
- Turnout is often low, and recruiting a representative cohort is not straight forward.

Organizing PB?

Lots of great documentation at:

- PBP: <https://participatorybudgeting.org>
- People Powered: <https://peoplepowered.org>

Or catch me after, and I'll be happy to chat or connect!

- Iodewijk@stanford.edu

Online tools

Multiple online tools are available to organize one component or another.

- Collect ideas
- Online synchronous meetings
- Asynchronous collaboration to improve projects
- Pre-selection
- Voting
- Evaluation

Elicitation & aggregation

Voting method components:

- Elicitation
- (Consideration)
- Aggregation

PB Stanford

- Since 2012
- Primarily digital, but allows paper ballot
- Currently used in multiple cities, incl. Seattle, Chicago, Cambridge MA, Vallejo
- Multiple voting methods
- Flexible visualization
- Interested to help cities with targeting campaigns

<https://github.com/StanfordCDT/pb>

Stanford Participatory Budgeting Platform

A platform for running online participatory budgeting elections

[Read Overview](#)

Overview

Stanford Participatory Budgeting Platform allows cities, municipalities, states and foundations and other organizations to run a participatory budgeting (PB) election in which people can vote on the budget. This project is made by the [Stanford Crowdsourced Democracy Team](#) at Stanford University. The project is open source and free

Stanford PB Platform

Settings determined by election organizer:

- Voting method: K-approval, K-ranking, knapsack, K-token
- Language
- Voter validation
- Voter registration
- Voting phases
- Available budget (B)
- Elicitation constraints (e.g. K)
- Project appearance
- Demographic survey

Optional: research ballot

PB Dieppe

Vous avez seulement **4 / 5** projets.

Passerelle d'observation du mascaret
Bandes et surface spéciale pour le hockey-boule : Maison des jeunes de Dieppe
Un parc nature comme dans le bon vieux temps
Composteurs et bariis de récupération d'eau de pluie
Achats d'ordinateurs pour la Bibliothèque publique de Dieppe

Brise du passé à la Place 1604
Skiez en Ville
Lakeburn Rocks – un mur d'escalade intérieur / Club garçons et filles de Dieppe
Contre l'isolement des aînés avec randonnées hebdomadaires
Acoustique et son de l'Atrium du Centre des arts et de la culture
Parc de chiens sans laisse : Parc Rotary St-Anselme
Balançoire adaptée pour fauteuils roulants
LABO on-site de Dieppe à la bibliothèque publique de Dieppe
Un patrimoine à découvrir: l'histoire de Dieppe racontée
Installation de plage multifonctionnelle

Vous avez sélectionné les projets suivants. **Changer leur classement en faisant glisser les icônes !!.**

- Skiez en Ville (\$17,000)
- Brise du passé à la Place 1604 (\$135,000)
- Installation de plage multifonctionnelle (\$120,000)
- Cours de finances personnelles (\$7,500)

Education

Technology Upgrades
Technology upgrades for Park East High School and Central Park East High School.
Estimated Cost: \$312,000
Location: 230 E. 105th; 1573 Madison Ave. (El Barrio/East Harlem)

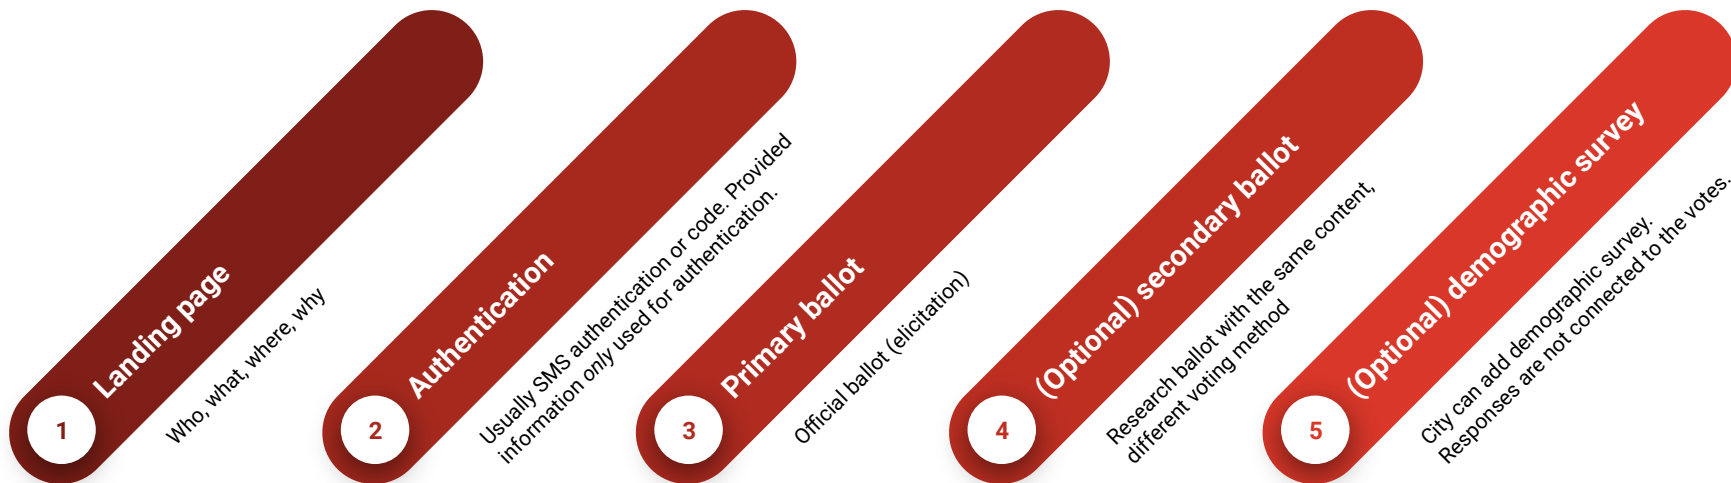

Selected

Air Conditioning at Bronx Schools
Installation of 1 air conditioning system at 345 Brooke Avenue for schools K343, K224 & K334. Installation of 1 air conditioning system at PS 181x.
Estimated Cost: \$500,000
Location: 628 Tinton Ave, 345 Brook Ave. (Bronx - Mott Haven & Longwood)

Selected

Bathroom Renovations **Air Conditioning:**

From the perspective of the voter

Decisions to make

- Languages
- Authentication
- Ballot size
- How to access ballot
- Voting method
- Survey

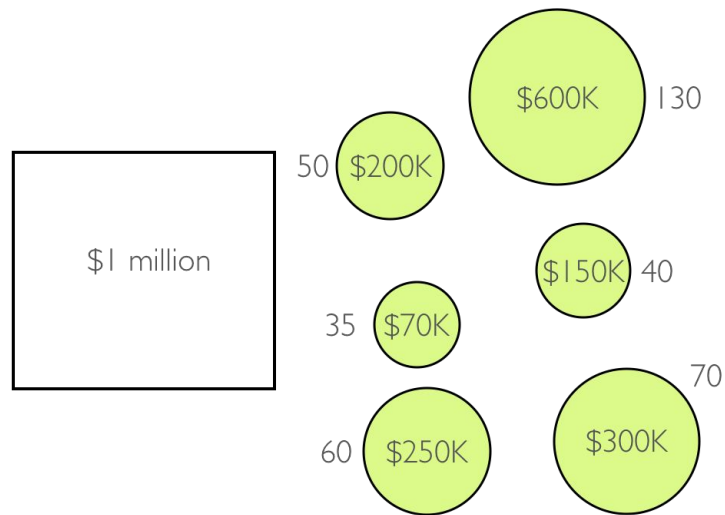

Voting methods

Budget voting

Problem:

- Fixed budget
- Limited set of proposals
- Each project has an associated cost
- Each voter has a utility for each project
- Each project then has an average utility

We want to maximize the total utility and arrive at the best societal outcome.

Voting methods

Multiple ways to ask a question

- Approval voting
 - Select K projects
- Ranking
 - Select K projects, and rank them in order
- Knapsack/shopping cart
 - Select projects based on an allocated budget
- K-token
 - Distribute K tokens over the projects

Each method eventually arrives at an 'aggregate':
which projects get funded

Approval voting

Select K projects from our proposals.

- Hard to consider trade-offs
 - Should we fix a pothole for \$1,000 or build a fountain for \$10,000?
- Odd incentives: approval voting is not strategy proof. There are scenarios where voting for something else than your preference gives you a better outcome.
- Aggregation is not straight forward

But: easy to implement on paper. Familiar.

You have selected

3 / 5

projects.

Safety & Environment

✓ Crosswalk Benbow Park

Crosswalk at Vandalia Road and Randleman Road

✓ Pet Waste Basket Benbow Park

Parks & Recreation

Weather Proof Stone Game Tables (Location being designated)

Streets, Sidewalks & Transportation

Bus Shelter Glendale Road & Randleman Road

Traffic Lane Randleman Road & Glendale Drive

Bus Shelter Lake Field Drive & Vandalia Road

City Council.

- The information provided will help you familiarize yourself with the project proposals in your district for 2016. You may choose up to 5 projects.
- Voting is open to all residents of Greensboro, ages 14 and up.

[Submit My Vote...](#)**Safety & Environment****Crosswalk Benbow Park**

This project's goal is to create a safe connection across a street connecting a park and residential housing at 1901 S. Benbow St.

Estimated Cost: \$4,000

✓ Selected

Remove

**Crosswalk at Vandalia Road and Randleman Road**

This project focuses on the repair and creation of crosswalks in the W Vandalia Rd. and Randleman Rd. intersection. It is also recommended that crosswalk signals be added on each corner.

Estimated Cost: \$20,000[Select](#)**Pet Waste Basket Benbow Park**

Install pet waste bag dispenser and trash receptacle at Benbow Park.

Estimated Cost: \$300

✓ Selected

Remove

K-ranking

Select K projects, and then rank them in order of value for money.

- Trade-offs are still difficult
- Aggregation is not necessarily straight forward
 - Typically use Borda count to aggregate (more 'points' for a higher rank)
- Can also be paper alternative for knapsack voting

You have selected

5/5

projects.

A good old fashioned nature park

Boards and a special playing surface for ball hockey : Dieppe Youth House

Select

Aguilar Library Windows

Reconstruct windows in the 100-year-old Carnegie building that houses the Aguilar library.

Estimated Cost: \$500,000

Location: 174 E.110th St. (El Barrio/East Harlem)

Not enough money

K-token

Distribute K tokens over your favorite projects

- Allows voters to indicate weight of preferences
- Strategic behavior not always clear
- ‘Gateway’ to more complex implementations such as quadratic voting

Experimental only on our platform.

Aggregation

PB Stanford currently uses 'greedy' aggregation:

- add the votes for each project
- Rank in order of number of votes
- Choose the highest ranked projects
- Define tie-breaker and exhaustion rule
 - What to do if we run out of budget? Skip or partially allocate?

In theory, other aggregation methods are possible (e.g. Method of Equal Shares)

Research

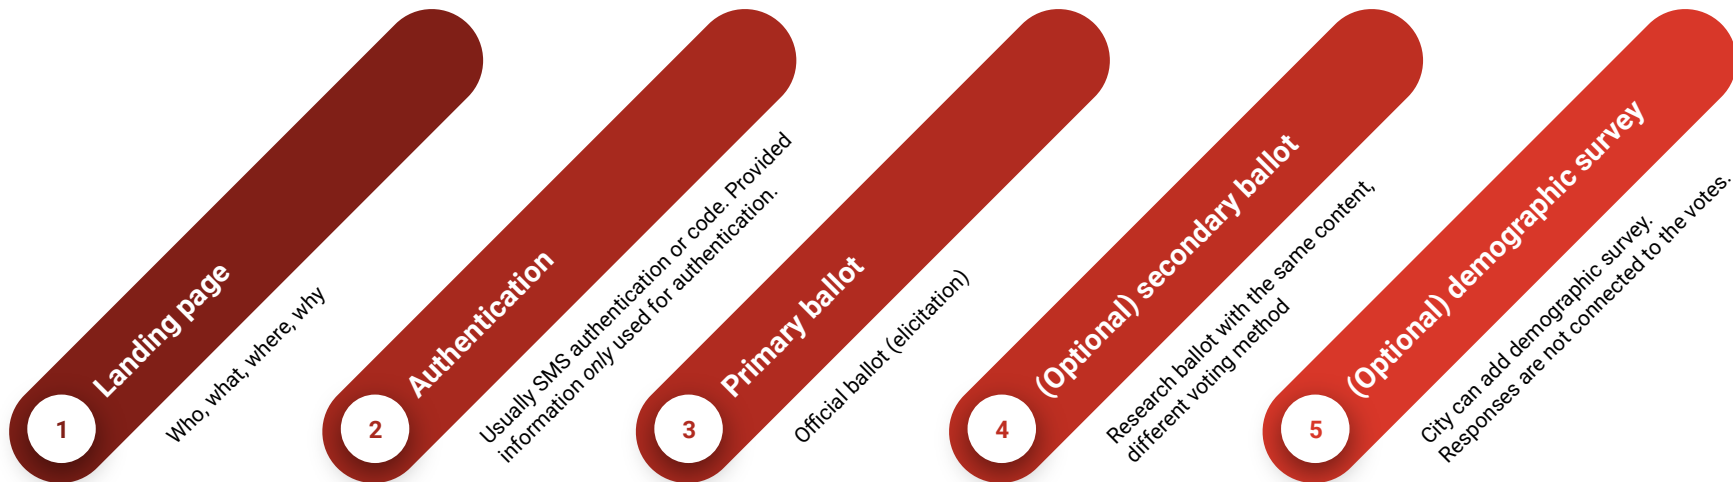

Voting method findings

Gelauff, Lodewijk, and Ashish Goel. “Rank, Pack, or Approve: Voting Methods in Participatory Budgeting”, *Under review* (2024) [ArXiv:2401.12423](https://arxiv.org/abs/2401.12423)

Dataset: <https://purl.stanford.edu/db709zg9088>

From the perspective of the voter

Elicitation methods

- K-approval voting
 - Select up to K projects
- K-ranking voting
 - Select up to K projects and rank them
- Knapsack voting
 - Select projects subject to a budget constraint

Data set

Basic units in the data set (May 2023):

- Election
 - Budget, ballot length (n = 124)
- Voter
 - Authentication method, phase completion and time spent per phase, election ID (n = 125,000)
- Project
 - Cost, election ID (n = 1,500)
- Vote
 - Voter ID, project ID, allocated budget, rank, tokens

What elections?

To give a very quick overview:
124 primary, 38 secondary ballots

- 79 + 2 approval
- 32 + 18 knapsack
- 13 + 18 ranking

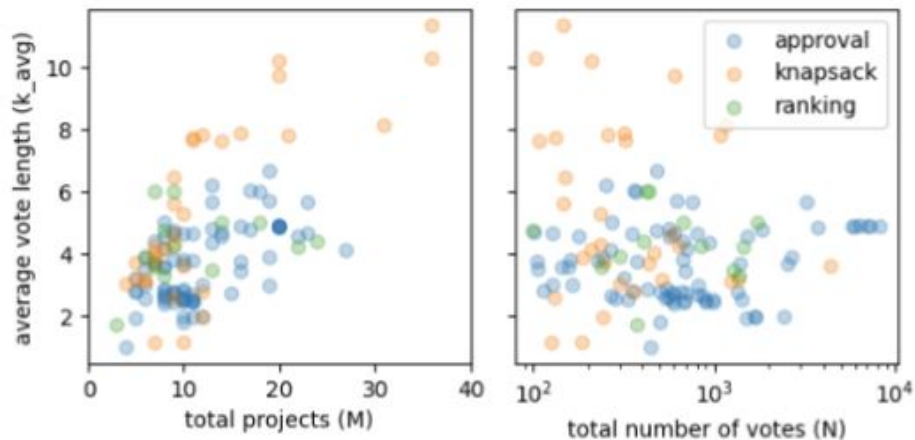

Figure 1: Elections in the dataset
(1 election out of range)

Why interesting?

Unique data set:

- Preference distributions per election
- Completion time and abandonment rate per ballot
- Vote pairs: same voter, same election, different voting method

This allows:

- Correlation of completion time and abandonment rate with ballot design
- Analyze effect of explicit elicitation constraints on individual preferences
- Analyze effect of implicit elicitation constraints on individual preferences
- Analyze effect of aggregation methods

Building blocks

- For each election we know median time spent (proxy for perceived complexity) and abandonment rate
 - Correlation between these statistics and different ballot design choices
- Ballot pairs from the same voter and election
 - Compare primary and secondary vote
- “Long” K-ranking votes
 - Infer what the knapsack/approval votes would have been
- Randomized Controlled Trial between voting methods
 - In some elections, secondary voting method was randomly assigned. We can compare those in aggregate.

Selected conclusions (1)

- Inferring knapsack votes from sufficiently long K-ranking ballots is a valid approximation.
 - Was claimed previously, we now have empirical evidence that it works
 - Useful when no digital interface is available
- Voters tend to select more expensive projects under K-approval vs Knapsack
 - This is mostly due to the less expensive projects on their vote
 - Both in aggregate and individually
 - Both explicit (budget awareness) and implicit (the method) constraints contribute
 - Corroborate and expand on initial findings from Goel et al. (2019)

Selected conclusions (2)

- Ballot complexity is positively correlated with median time spent by voters but no significant correlation is found with abandonment rate
 - Caveats: low turnout, self-selection, complexity within reason etc.
- Using the knapsack ballot does correlate with higher median time and abandonment rate, inconclusive causality
 - Avg abandonment rate of the primary ballot is around 5.4%.
 - Coefficient in multiple regression: -0.001 (app), 0.043 (knap), 0.014 (rank)
 - Controlled trial with secondary ballots suggests lower abandonment rate for knapsack vs ranking

Ongoing next steps

- Compare 'greedy' aggregation to Method of Equal Shares
 - Average and individual utility
 - Average project cost
- More data
- Token voting
 - Consistency with ranking?
- Opportunity: more about ballot design? Optimal K?

Budget Feedback Process

Gelauff, Lodewijk, and Ashish Goel. “Opinion Change or Differential Turnout: Changing Opinions on the Austin Police Department in a Budget Feedback Process”, *Under review* (2024) [ArXiv:2310.11643](https://arxiv.org/abs/2310.11643)

Budget feedback surveys

Constructive feedback on city budget proposals

More bespoke - many variables

Some examples: <https://budget.pbstanford.org>

- Balancing the budget between departments
- Menu of budget interventions to combine

Let voters make the hard decisions individually, and come with a constructive counter proposal.

Austin 2020 budgeting exercise

Setting: Budget feedback survey, City of Austin

Revenue: level of support per category

Expenditures: redistribute budget across departments

CITY OF AUSTIN | FY 2021 City Budget Feedback

Where does the money come from?

General Fund revenue comes from property and sales taxes, user fees, utility transfers, franchise fees and other revenue. The graph below shows the total amount of budgeted revenue in each major revenue category.

As a result of the strict measures imposed globally to contain the spread of Coronavirus, the City anticipates significant reductions in sales taxes, mixed beverage taxes, user fees and fines. The City has two options to raise more revenue in order to maintain current service levels: increase property taxes or increase user fees.

Property Tax (Not adjustable)

Are you willing to support an increase in City of Austin property taxes to fund community priorities?

Yes No No Opinion

For each of the following service areas, what level of fee increases would you support to maintain current service levels?

1. Animal Services fees
For example, the animal adoption fee for a cat or dog is \$75.
 No Change Moderate Increase Significant Increase No Opinion

2. Austin Public Health permit fees
Examples include, a one-day temporary food permit is \$57 per booth and a farmers market permit is \$100 per year.
 No Change Moderate Increase Significant Increase No Opinion

CITY OF AUSTIN | FY 2021 City Budget Feedback

Where does the money go?

As seen in the chart below, there are ten City departments that make up the General Fund. The services provided by these ten departments include, public safety services, recreation programs, health and housing.

In this activity, you will have the opportunity to reflect your priorities for how the City allocates money among service areas. The intent of the exercise is to best understand the relative importance you place on different services. The total funding needs to remain the same.

Current Budget 1088.58M | Your Budget 1089.08M | 500.00K Deficit

Animal Services: 14.55M (Your change: -1.00M) Severe reduction in services.

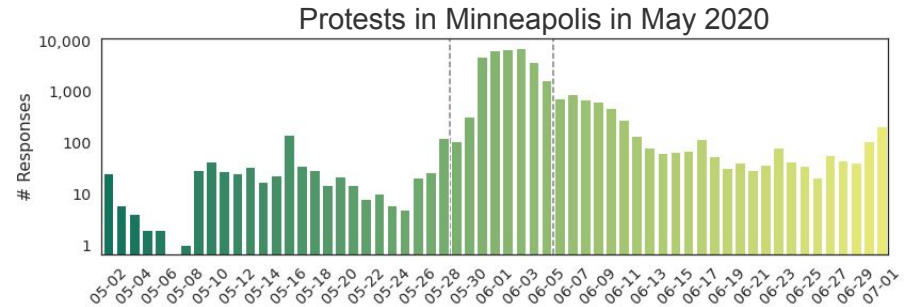

Austin Fire Department: 201.20M (Your change: +500.00K) Moderate increase in services.

L. Gelauff and A. Goel, "Opinion Change or Differential Turnout: Austin's Budget Feedback Exercise and the Police Department" in EAAMO '22

Austin 2020 budgeting exercise

- Police budget divisive issue
- Tumultuous year
- Murder of George Floyd in the middle of survey
- After exogenous shock, daily responses increased a lot

L. Gelauff and A. Goel, "Opinion Change or Differential Turnout: Austin's Budget Feedback Exercise and the Police Department" in EAAMO '22

Austin: exogenous shock

After the exogenous shock in 2020:

- Respondents skew younger and more likely to rent their home than ACS
- Surprisingly little shift in racial/ethnic demographics
- 93% support to decrease Police budget (from 43%)
- Lower support for increasing service fees
- Changes bounce back somewhat in segment 3

Not immediately clear if the shift in opinion is because of differential turnout or opinion change

We show that there is at least some opinion change

Table 6. Age distribution

Age Group	2018 ACS	2020 seg 1	2020 seg 2	2020 seg 3	2021
18-	0.197	-	0.016	0.014	
18-24	0.105	0.034	0.304	0.167	0.052
25-34	0.227	0.283	0.457	0.431	0.292
35-44	0.156	0.246	0.155	0.223	0.266
45-54	0.119	0.198	0.044	0.087	0.177
55-64	0.103	0.14	0.017	0.048	0.106
65+	0.094	0.098	0.008	0.030	0.107

Table 17. Support for any Increase of Budget by time segment

Department	2020 seg 1	2020 seg 2	2020 seg 3
Animal Services	0.197	0.557	0.493
Austin Fire Department	0.260	0.446	0.404
Austin Police Department	0.229	0.027	0.059
Austin Public Health	0.537	0.899	0.850
Austin Public Library	0.284	0.702	0.605
Emergency Medical Services	0.399	0.743	0.674
Municipal Court	0.097	0.370	0.332
NHCD	0.392	0.828	0.792
Other	0.120	0.337	0.327
Parks and Recreation	0.366	0.661	0.613
Planning and Zoning	0.104	0.301	0.281

Austin: clusters

We identified 3 robust and well-defined (k-means) clusters:

- Robust
 - Centroids robust to resampling and reclustering
 - 98.6% (2020) and 96.7% (2021) avg accuracy
- Meaningful
 - Decrease police, no revenue change
 - Less/no decrease police, some revenue increase
 - Decrease police, increased revenue

More meaningful than analysis along demographic lines.

Cluster centroids, 95% confidence intervals after resampling (98.6% accuracy)

Austin: clusters

We observe a strong shift in clustering around the exogenous shock. Cluster 0 barely existed before, suggesting that there was an actual change in opinion rather than turnout.

2021 data confirms that these clusters were meaningful and that there was likely a lasting shift.

Comparison with PB clusters

Comparison: 4 PB elections

Less volatile than Austin

Shows scalability of the method

Austin: clusters

Clustering multi-dimensional data proved here a useful tool to understand what exactly happened in a way that demographic analysis could not provide.

Available without any demographic data about respondents.

- 2021 survey and follow-up survey confirmed that clusters capture persistent opinions
- No reason to believe there will always be meaningful clusters
- No reason to assume 3 is always the 'right' number

Big picture

- Ballot complexity correlated with median voting time
 - Not correlated with abandonment rate!
- Knapsack effect
 - Implicit constraints
 - Explicit constraints
 - Especially relevant for the 'lower cost projects'
 - Election specific effect?!
- Clustering
 - Useful to understand how opinions correlate
 - Turnout effects over time
