

**IBM**

# Migrating a monolith to Cloud-Native and the stumbling blocks that you don't know about

JJ Asghar, Developer Advocate

[awesome@ibm.com](mailto:awesome@ibm.com)

@jjasghar

**What is AsgharLabs?**

**What AsgharLabs thought they needed  
to do.**

**Where I came into the conversation to  
help AsgharLabs.**

**Questions you should ask after getting  
your app containerized**

**Who containerized your app?**

**Why did you containerize your app?**

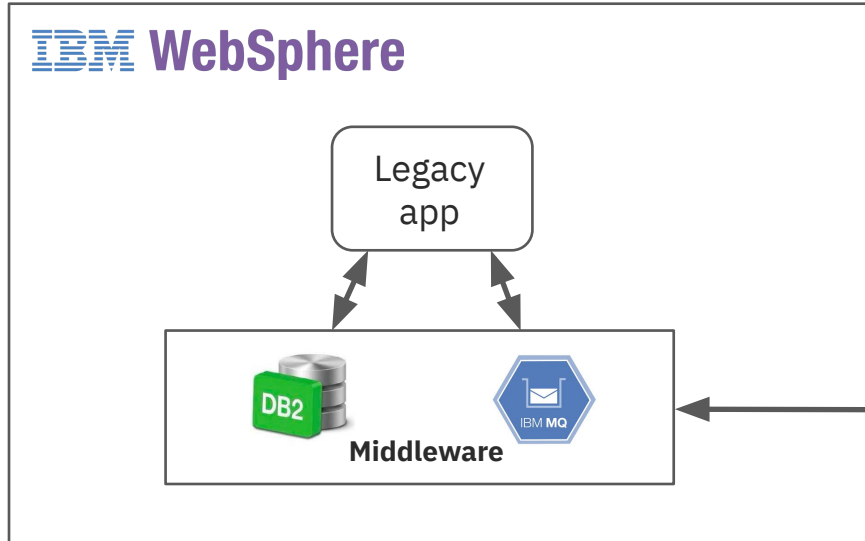

**Where did you deploy or plan on  
deploying you containerize app?**

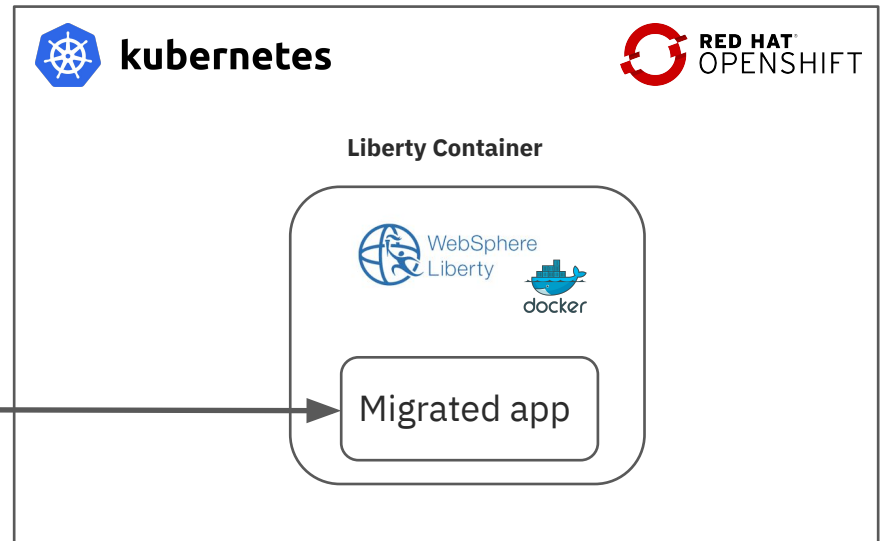

**What did we actually containerize?**

# Replatform example

Before

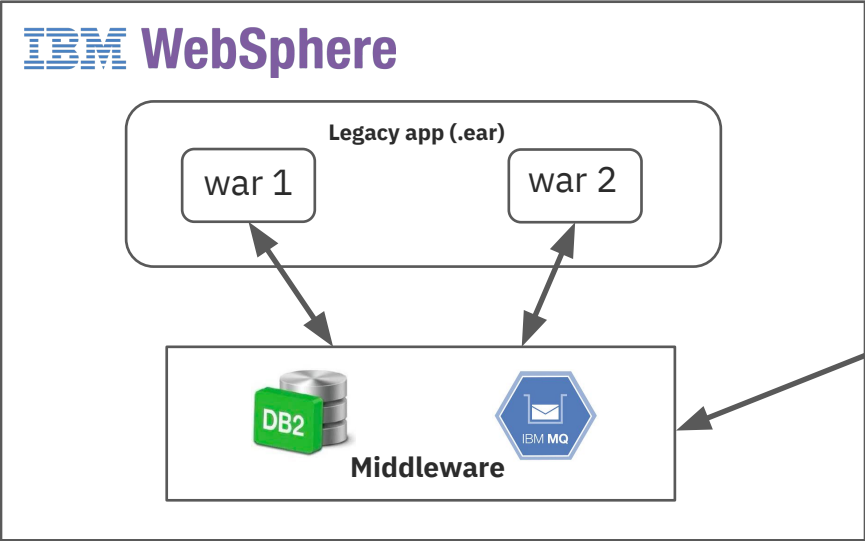

After

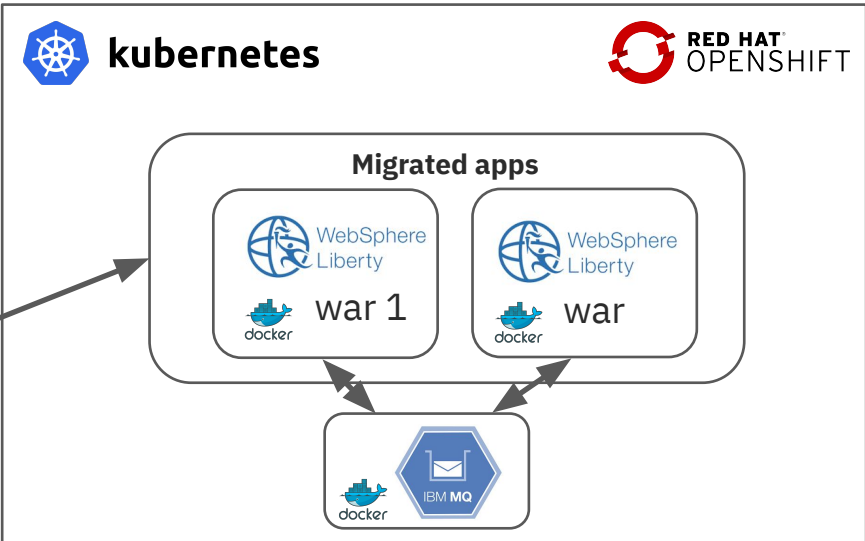

# Repackage to microservices

Before

After

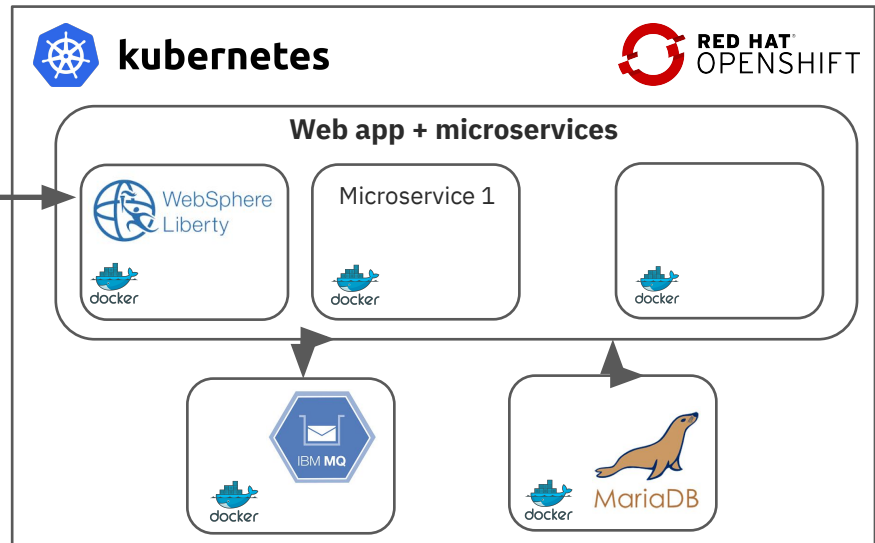

# Refactor using the strangler pattern

Before

After

**Where are the architectural advantages  
and disadvantages?**

**What do you mean our goal is to move  
away from the CCB?**

**Are we doubling up on things?**

**Isn't automation good here?**

**Why is this thing so complicated now?**

*You had a ornery bull mastiff,  
now you have 13 yipping  
chihuahuas - Robb Kidd*

Too true not to be ignored.

**Questions you should ask about the  
cultural shift that will happen**

**Build that pipeline.**

**Learn to collaborate with other teams.**

**Visibility and Monitoring.**

**How do economics of the Cloud can differ from your data center?**

**What do you mean our support is now  
Stack Overflow?**

**Some tangible things you can start with  
to help become more successful.**

Conclusion and where you *ideally* can go from here.

*You wouldn't use a saw when  
you needed a hammer, or a  
hammer when you needed a  
saw, right? - Thomas Cate*

**Thank you!**
