

Navigating the Transit Data Landscape

Nina Kin

Who am I?

Nina Kin

Tech Lead
Digital Experience Team
Customer Experience Department

- Software engineer
- Public transit rider
- Urban explorer
- Civic tech nerd
- Multi-disciplinary crafter and musician
- Generally inquisitive person

Nina Kin

- **MaptimeLA** - Community for map enthusiasts interested in learning to use open source mapping tools. Contribute to open mapping projects like OpenSidewalks.

<https://www.meetup.com/maptimela/>

- **Data + Donuts LA** - Monthly breakfast lecture series highlighting local government tech and data projects.

<https://datadonuts.la/>

Nina Kin

- **LA Arts Datathon** - Brings together members of the arts and tech communities. Coming soon!
<https://www.lacountyarts.org/learning/arts-datathon>
- **International Humanitarian Mapathon** - Annual event teaching people how to contribute to humanitarian mapping efforts. April 23-25
<https://mapathon.la/en/>
- **Board of Directors, MobilityData**
<https://mobilitydata.org/>

Nina Kin

What I do:

- Advocate for rider information needs inside the agency.
- Improve the way digital information reaches riders.
- Advance data standards in the transit industry.
- Pilot more sustainable tech and data practices.

... with varying degrees
of success! 😄

Nina Kin

I am...

- Not involved in operations!
- Not involved with the hardware or data infrastructure!
- Not involved with service or planning!

I DO like to ask questions, learn, and share!

First Stop: Generating the Data

Service Planners + Schedulers

Lots of factors go into planning & scheduling:

- Operator Safety and Experience – very high priority!
 - Stops are in safe places
 - Minimize the possibility of accidents
 - Trip length
 - Route familiarity
 - Access to essential amenities (bathrooms!)

Operator is
the preferred
term!

Service Planners + Schedulers

➤ Community

- Feedback
- Changing traffic patterns
- Commercial/residential developments
- How much we expect the route to be used.
- How it connects to other existing routes (including from other agencies!)

➤ Physical Limitations

- Street width
- Turning angles at intersections
- Length of buses used on a route

Service Planners + Schedulers

➤ Efficiency

- Optimizing for cost/benefit
- Efficiently allocating resources - optimize time spent delivering service versus moving buses and staff around.
- Run the most service for the least cost
- Nearside vs Farside stops

➤ Jurisdiction

- Cities have to agree to route, stop, and layover locations!
- Layover locations and times need to be negotiated with other transit agencies that use them!

Scheduling System

HASTUS handles:

- Scheduling
- Operator Assignments
- Service Cancellations
- Cost Optimization
- Operator Payroll
- Long Term Planning

Exported as **GTFS** data

What is GTFS?

What is GTFS?

It is a...

- **Data Specification** - a set of rules defining what a dataset should look like for producers and consumers.
- **Representation of Transit Service** - a transit agency's service in a machine-readable format.

Why does GTFS exist?

- Without a data standard, everyone would publish their data differently and you'd have **chaos**.
- Consumers of the data would have to create custom code to account for every **single transit agency**.
- LA County alone has over **50 public transit** service providers.

Detour: Origins of GTFS

Google Maps in 2005

July 2005

TriMet  Google Partnership

“...make it just as easy to get transit directions as it is to get driving directions from anywhere in the world.”

- Bibiana McHugh, TriMet

An Opportune Moment

Technological Barriers:

- **Machine-readable data already existed**
 - TriMet's service data already existed in their scheduling system as a set of tables.
- **Data was already accessible as a file export**
 - TriMet's scheduling system allowed for the data to be exported in CSV format.

An Opportune Moment

Business Barriers:

- **Agency already supported Open Source and Open Data**
 - TriMet already had a long history of supporting open source and open data.
 - TriMet was already publishing an open data feed used by outside developers.
- **Procurement policies already existed for Open Source**
 - TriMet already had an open source-friendly procurement policy in place for a decade.
- **Willing partner in private industry**
 - Google Maps was already interested in expanding to include transit.

December 2005

Google Transit Launches with TriMet Data

“As Google Transit went live for the first time... the number of hits to the site increased exponentially... the counts were reaching staggering numbers, even by Google standards.”

- Bibiana McHugh, TriMet

GTFS is born! 

Directions
 Start address: 100 NW Couch St, Portland, OR 97209
 End address: Hillsboro, OR

100 nw couch st, portland to hillsboro, oregon by 8pm
 e.g., 'jdx to 100 nw couch st, portland, oregon' or 'jdx to portland, oregon at 7pm'

Transit Trip Planner

Directions [Drive There](#) - **Take Public Transit**

Start address: 100 NW Couch St
Portland, OR 97209

End address: Hillsboro, OR

When [edit] Arrivals before 8:00pm:
 7:05pm -> 7:57pm (51 mins)
 6:50pm -> 7:44pm (54 mins)
 6:34pm -> 7:30pm (55 mins)
 6:21pm -> 7:17pm (55 mins)

Duration: 51 mins in transit
 13 mins walking to/from your route

Cost: \$1.80 (vs. \$8.41 driving*) [details](#)

Begin by walking

1. Start at 100 NW Couch St
2. Go to Skidmore Fountain MAX Station (takes about 1 min)

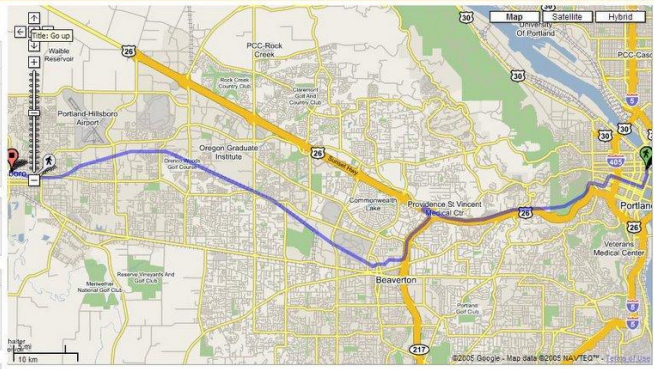

Take the MAX Blue Line (Direction: Hillsboro)

3. 7:05pm leave from Skidmore Fountain MAX Station
4. 7:57pm arrive at Tuality Hospital/SE 8th Ave MAX Station

End by walking

5. Go to Hillsboro, OR (takes about 12 mins)

These directions are for planning purposes only. You may find that construction projects, traffic, or other events may cause route conditions to differ from the map results.

Google Transit Expands

2007

Google Transit Expands

More transit agencies recognize the benefits as they adopt and publish GTFS. Google Transit is now available in more than 10 cities and Japan.

First iPhone Launches

2008

First Android Launches

2009

4G Launches

Key Early Decisions

- Keep the **CSV format** published by the scheduling systems.
 - Keeps GTFS as simple as possible to keep the barrier to participation low for smaller, less-resourced agencies.
- Keep the data specification **open and free**.
- Make the resulting data **free and publicly accessible**.

GTFS

~~Google~~ General

Transit

Feed

Specification

2010

Name Changed from “Google” to “General”

GTFS is widely popular!

But concerns are raised so name is changed to “General”, reflecting GTFS usage outside Google products.

Development starting to splinter as unique flavors of GTFS pop up to account for different needs.

GTFS-realtime Extension Released

August 2011

GTFS-realtime Extension Released

GTFS-realtime extension created by Google and a consortium of transit agencies.

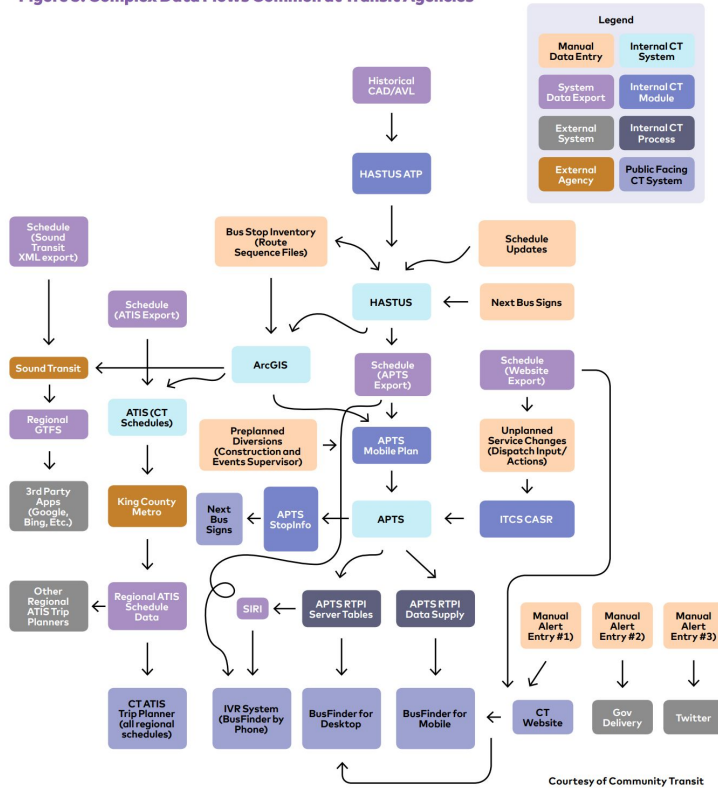

June 2015

Two-Day Workshop on Transit Data Interoperability

Hosted in San Francisco by the Rocky Mountain Institute (RMI), transit data interoperability is seen as a critical foundation for the future of transit.

Results in a recommendation to create Best Practices to grow the space.

Figure 5. Complex Data Flows Common at Transit Agencies

February 2017

GTFS Best Practices Published

RMI convenes a working group to identify issues and improve GTFS.

The working group publishes the GTFS Data Best Practices.

October 2017

Interoperable Transit Data Workshop

RMI and TransitCenter host a two-day workshop in New York to identify challenges and opportunities to improve transit data practices.

GTFS Best Practices Established

MobilityData Established 🎉

April 2019

MobilityData Established

Grown out of the original working group, MobilityData is created as a non-profit to oversee the continued growth of GTFS.

2024

Today

GTFS is used by over 10,000 agencies in over 100 countries.

MobilityData's work now covers:

- Public Transit data standards (GTFS)
- GTFS Data Platforms & Tools
- Shared Mobility data (GBFS)

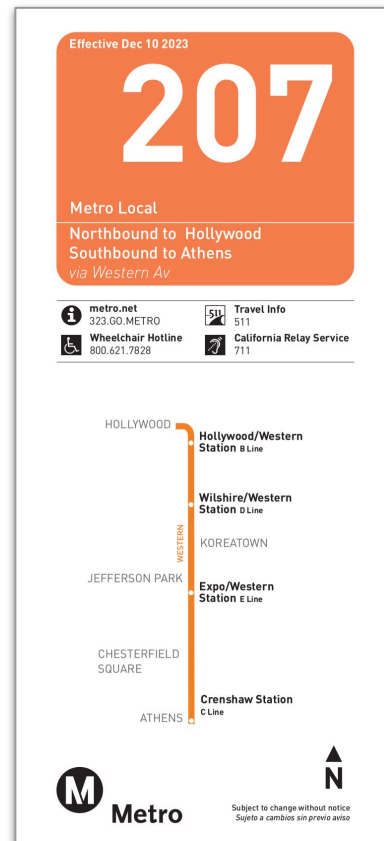

Next Stop: GTFS-schedule

GTFS-schedule

For: **Planned Service**

Metro releases Bus & Rail as separate GTFS datasets!

- Rail - https://gitlab.com/LACMTA/gtfs_rail
- Bus - https://gitlab.com/LACMTA/gtfs_bus

GTFS Update Frequency

- **Rail** - updated every weekday night!
- **Bus** - Updated during **Shakeups**. Usually twice a year (June, December). Minor updates rolled out weekly.

Shakeups:

- 2x a year in June, December
- Major service changes - major changes to routes and stops
- Bus operators' chance to bid on routes, which is why major changes don't happen outside of Shakeups

What does GTFS-schedule data look like?

Zip File

Inside is a series of **.txt** files:

- **Agency.txt**
- **Calendar.txt**
 - and/or -
 - Calendar_dates.txt**
- **Routes.txt**
- **Stop_times.txt**
- **Stops.txt**
- **Trips.txt**

And more...

- Shapes.txt
- Fare_attributes.txt
- Fare_rules.txt
- Timeframes.txt
- Pathways.txt
- Transfers.txt
- Frequencies.txt
- Levels.txt
- Feed_info.txt
- Translations.txt
- Stop_areas.txt
- Areas.txt

Agency.txt

Metro releases Bus and Rail GTFS separately!

agency.txt ●

agency.txt > data

```
1 agency_id ,agency_name ,agency_url ,agency_timezone ,agency_lang ,agency_phone
2 LACMTA , "Metro - Los Angeles" , https://www.metro.net , America/Los_Angeles , en , "(323)466-3876"
3
```

Primary key: **agency_id**
(not required in other files if only 1 agency)

Tells you what agencies are in this GTFS dataset

Routes.txt

Primary key: `route_id`

routes.txt

routes.txt > data

```
1 route_id ,route_short_name ,route_long_name ,route_desc
2 2-13172 ,2 ,Metro Local Line ,WESTWOOD - EXPOSITION PARK VIA SUNSET-ALVARADO
3 4-13172 ,4 ,Metro Local Line ,DOWNTOWN LA - SANTA MONICA VIA SANTA MONICA BL
4 10-13172 ,10/48 ,Metro Local Line ,W HOLLYWOOD-DTWN LA -AVALON STA VIA MELROSE-AVALON
5 14-13172 ,14/37 ,Metro Local Line ,CEDAR SINAI-DTWN LA-WASH/FAIRFAX VIA BEVERLY-ADAMS

Tells you the times a vehicle *arrives at* and *departs from*, for each stop on each trip

This file is over 200MB
unzipped for Metro's bus
GTFS!

Relationships, Primary Keys

**A few things to be
aware of...**

GTFS Gotchas

If `pickup_type == 1 && drop_off_type == 1...`
This may be a layover or a terminal that passengers aren't allowed in.

In Bus `stop_times.txt`:

<code>pickup_type</code>	Enum	Optional	Indicates pickup method. Valid options are: <ul style="list-style-type: none"><code>0</code> or empty - Regularly scheduled pickup.<code>1</code> - No pickup available.<code>2</code> - Must phone agency to arrange pickup.<code>3</code> - Must coordinate with driver to arrange pickup.
<code>drop_off_type</code>	Enum	Optional	Indicates drop off method. Valid options are: <ul style="list-style-type: none"><code>0</code> or empty - Regularly scheduled drop off.<code>1</code> - No drop off available.<code>2</code> - Must phone agency to arrange drop off.<code>3</code> - Must coordinate with driver to arrange drop off.

GTFS Gotchas

In Rail `stops.txt`:

1	stop_id	stop_code	stop_name	stop_desc	stop_lat	stop_lon	stop_url	location_type	parent_station
2	80122	80122	,7th Street / Metro Center Station - Metro A & E Lines	,	,34.04861	,-118.258822	,	0	80122S

Metro's Bus GTFS - Parent-Child Routes

Why do we do this?

- Some trips change route number mid-trip to avoid ending the trip where the route changes.

Why?

- At the end of a trip, the bus operator needs to be able to **layover** and access a **bathroom** (contractually, legally, and biologically!).
 - Some cities won't agree to let us layover on their streets.
 - We negotiate contractual agreements with businesses, but sometimes we can't find one that will allow our bus operators to use their bathroom.
 - Sometimes we have to build our own bathroom!

Some apps show you when their predictions use realtime vs schedule data!

Detour!

Realtime Tracking - Bus

Two systems:

- **ATMS** - Advanced Transportation Management System
 - **AVL** - Automatic Vehicle Location
 - Transmits data via radio
 - Updates every **2-3 minutes**
 - Fully deployed **2006**
- **WiFi Routers**
 - Transmits data via cell towers
 - Updates every **2-5 seconds**
 - Fully deployed **2021**

Realtime Tracking - Rail

➤ Track Circuits

Realtime Tracking - Rail

- Supervisory Control and Data Acquisition (**SCADA**) system
 - Controls and monitors processes like train speed, switches, signals, etc.

GTFS-realtime

Format:

- **Protobuf** (Protocol Buffer) - a binary format created by Google to be more efficient when transferring lots of data.
- GTFS-realtime often provided as **JSON** as well.

GTFS-realtime

No trip assigned?

- Our Wifi Routers send location as long as the bus is powered.
- Vehicle may be traveling or waiting between trips.
- Vehicle could be replacing another vehicle without the trip being reassigned.
- ATMS might be down.

Remember: Trip tells us *what* times a vehicle arrives and departs *what* sequence of stops! This is essential for predictions.

```
204 {

End of the Line: Where do we go from here?

MORE GTFS

GTFS is Constantly Growing!

Specification amendment process for:

➤ **Bus**

<https://gtfs.org/schedule/process/>

➤ **Rail**

<https://gtfs.org/realtime/process/>

GTFS Governance

Broadly speaking, new extensions require:

- 1 data producer
- 1 data consumer
- A production implementation
- A series of public votes on GitHub

GTFS Extensions - TripModifications

Detour shapes in GTFS-realtime! Voting closed 3/7!

<https://github.com/google/transit/pull/403>

gcamp commented on Sep 26, 2023 • edited

Contributor

Following the proposal of [GTFS Trip-Modifications in February](#), we are now ready for the pull request stage!

As a reminder, Trip-Modifications are modifications done to a trip to modify its shape, remove stops that are not served anymore, and potentially add temporary stops. Trip-Modifications is mainly used in a detour use case.

Today, we're [launching the detour feature](#) in Transit for more agencies with Trip Modifications produced by [Swiftly](#)! Now that there is one producer and one consumer, the current PR is not an experimental field and actually removes the experimental tag for `shape`, which has been in the [spec for 2 years](#).

Feel free to ask questions, or give feedback!

GTFS Extensions - Flex

Non-fixed route, on-demand, “flexible” transit.

September 2023 discussion reached consensus on using GeoJSON for zones!

<https://github.com/google/transit/pull/433>

tzujenchanmbd commented last week • edited ▾ Collaborator Author ...

Hello everyone,

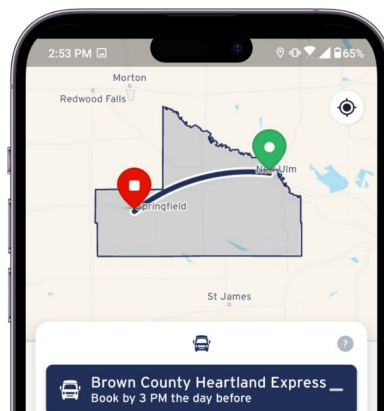

Support resources from first adopters are ready.

- We have one producer: [Trillium](#)
- We have two consumers: [Transit](#) and [OpenTripPlanner](#)

Please refer to this [adoption tracker](#) for the fields adopted by each organization.

As per the [GTFS Amendment process](#), the requirements to open a vote are met. We are opening a vote for adding GTFS-Flex.

Voting ends on 2024-03-18 at 23:59:59 UTC.

GTFS Extensions - Fares v2

Base implementation of v2 passed vote in May 2022!

<https://github.com/google/transit/pull/286>

Development continues!

Cal-ITP

Cal-ITP (Caltrans)

<https://www.calitp.org/>

Cal-ITP has 4 goals for their work:

- 1** invites travelers toward more efficient and sustainable modes of travel,
- 2** reduces operating costs for transit agencies,
- 3** simplifies every traveler's life, and
- 4** simultaneously welcomes every single person in this country to a seamless, user-friendly system—making paying for a transit ride just as easy as buying coffee.

Cal-ITP (Caltrans)

What does that translate to?

- **Contactless Payments**
Making it easier for transit agencies to implement contactless payments so riders can tap with the debit card, credit card, or smartphone already in their pocket!
- **Benefits**
Automating customer discounts so riders instantly qualify for and receive discounts
- **GTFS**
Standardizing information for easy trip planning by expanding and beefing up the GTFS ecosystem

Mobility Data Interoperability Principles (MDIP)

MDIP

<https://www.interoperablemobility.org/>

- Effort started by Cal-ITP.
- Grown into an international coalition.
- A declaration that the industry needs interoperable data to advance.
- That means transit agency and transit vendor buy-in.
- That means creating a plan and providing resources.
- Recently rehomed to MobilityData to continue the work.

Metro

What is Metro doing?

Cal-ITP (CalTrans)

- Metro is a partner!

Mobility Data Interoperability Principles (MDIP)

- Metro is a co-author!

What is Metro doing?

GTFS Extensions

- Looking for partnership opportunities, actively voting on the new extensions being developed.

Mobile App Consolidation Working Group

- Metro is pushing for GTFS-schedule and GTFS-realtime data to exist regionally
- Metro is advocating for expanding data standards in the industry.
